Contents

1	**OPERATIONS RESEARCH: AN INTRODUCTION**	**1-10**
1.1	Introduction	1
1.2	The nature and definition of Operations Research	1
1.3	Objectives of Operations Research	2
1.4	Characteristics of Operations Research	2
1.5	Modelling in Operations Research	3
1.6	Types of models	4
1.7	General methods for solving O.R. models	5
1.8	Phases of Operations Research study	6
1.9	Scope of Operations Research	7
1.10	Development of Operations Research in India	8
2	**LINEAR PROGRAMMING : SOME MATHEMATICAL PRELIMINARIES AND CONVEX SETS**	**11-48**
2.1	Introduction	11
2.2	Matrix	11
2.3	Type of matrices	11
2.4	Operation on matrices	13
2.5	Properties of matrix addition	15
2.6	Properties of multiplication of matrix by a scalar	16
2.7	Multiplication of matrices	17
2.8	Determinant of a square matrix	18
2.9	Properties of determinants	18
2.10	Evaluation of a determinant by Sarrus diagram	19
2.11	Minors and cofactors	19
2.12	Singular and non-singular matrix	20
2.13	Transpose of a matrix	20
2.14	Properties of transpose of a matrix	21
2.15	Symmetric matrix	22
2.16	Skew-symmetric matrix	22
2.17	Rank of a matrix	22
2.18	Echelon form of a matrix	23
2.19	Inverse of a matrix	24
2.20	Convex set	27
2.21	Some related definitions	27
2.22	Convex hull	29
2.23	Convex function and convex polyhedron	29
2.24	Feasible and basic feasible solutions	40

3	**LINEAR PROGRAMMING PROBLEMS : FORMULATION AND GRAPHICAL SOLUTIONS**	**49-108**
3.1	Introduction	49
3.2	Basic terminology of linear programming	49
3.3	Basic requirements of LPP	50
3.4	Basic assumptions of LP model	50
3.5	Advantages of linear programming	50
3.6	Limitations of linear programming	51
3.7	Application areas of linear programming	51
3.8	Standard form of linear programming problems	52
3.9	Matrix form of LPP	53
3.10	Mathematical formulation of linear programming problem	53
3.11	Extra variable needed	54
3.12	Solution of linear programming problems	63
3.13	Graphical solution methods of an LPP	64
4	**SIMPLEX METHOD**	**109-174**
4.1	Introduction	109
4.2	Terminology and notations	109
4.3	Fundamental theorem of linear programming	110
4.4	Reduction of feasible solution to basic feasible solution	112
4.5	To find the improved basic feasible solution (BFS) from a given BFS	124
4.6	Conditions for the existence of unbounded solutions	126
4.7	Conditions for improved basic feasible solution to become optimal	127
4.8	Alternative optimal solutions	128
4.9	Inconsistency and redundancy	128
4.10	Procedure to obtain initial basic feasible solution	128
4.11	Simplex algorithm	130
4.12	Simplex method : Case of minimization	144
4.13	Artificial variable technique	144
4.14	Two-Phase method	153
4.15	Some special linear programming problems	158
4.16	Solution of simultaneous linear equations by Simplex method	167
4.17	Inverse of a matrix by Simplex method	169
5	**DEGENERACY IN LINEAR PROGRAMMING**	**175-188**
5.1	Introduction	175
5.2	Degeneracy in linear programming	175
5.3	The necessary and sufficient condition for the existence of non-degeneracy	175
5.4	Occurrence of degeneracy in linear programming	175
5.5	Resolution of degeneracy	175
6	**REVISED SIMPLEX METHOD**	**189-230**
6.1	Introduction	189
6.2	Standard form of Revised Simplex method	189

6.3 Revised Simplex method for standard Form-I 189
6.4 Revised Simplex method for standard Form-II 207
6.5 Comparison of Simplex method and Revised Simplex method 227

7 DUALITY IN LINEAR PROGRAMMING 231-266

71 Introduction 231
7.2 Relationship between Primal and dual 231
7.3 Symmetric Primal-Dual problems 232
7.4 Dual of an LPP with mixed restrictions 234
7.5 Some results on duality 245
7.6 Method for obtaining the solution to the dual from the final simplex table of the primal and vice-versa 255
7.7 Summary of the correspondence between primal and its dual 245

8 DUAL SIMPLEX METHOD AND PRIMAL-DUAL ALGORITHM 267-286

8.1 Introduction 267
8.2 Dual Simplex Algorithm 267
8.3 Primal-Dual Algorithm 276
8.4 Steps of Primal-Dual Algorithm 280

9 SENSITIVITY ANALYSIS IN LPP 287-320

9.1 Introduction 287
9.2 Change in the objective function coefficients (Price Vectors), c_j 287
9.3 Variation in the requirement Vector, b_i 296
9.4 Variation in the elements, a_{ij} of the coefficient matrix A 303
9.5 Addition of a new variable 306
9.6 Addition of a new constraint 306

10 INTEGER PROGRAMMING 321-354

10.1 Introduction 321
10.2 Need of Integer linear programming 321
10.3 Types of Integer linear programming problems 321
10.4 Methods to solve an Integer linear programming problem 322
10.5 Problem on mixed integer linear programming 336
10.6 The Branch and Bound technique 342

11 GOAL PROGRAMMING 355-394

11.1 Introduction 355
11.2 Concepts of Goal programming 355
11.3 Goal Programming model formulation 355
11.4 General form of Goal programming problem 361
11.5 Method of Solution of a Goal programming (GP) problem 362

12 PARAMETRIC LINEAR PROGRAMMING 395-422

12.1 Introduction 395
12.2 Parametric Programming 395
12.3 Systematic variation in the objective function coefficients, c_j 395
12.4 Systematic linear variation in b_i 413

13	**THE TRANSPORTATION PROBLEM**	**423-484**
13.1	Introduction	423
13.2	Mathematical formulation of Transportation problem	423
13.3	Solution of the Transportation problem	427
13.4	Methods of finding initial solution	427
13.5	Test for optimality	443
13.6	Degeneracy in Transportation problems	456
13.7	Unbalanced Transportation problem	463
13.8	Some miscellaneous solved problems	465
14	**ASSIGNMENT PROBLEMS**	**485-528**
14.1	Introduction	485
14.2	Mathematical representation of Assignment problem	485
14.3	Difference between Transportation and Assignment problem	486
14.4	Theorems on Assignment problem	486
14.5	Solution of Assignment problem : Hungarian Method	487
14.6	The maximal Assignment problem	498
14.7	Unbalanced Assignment problem	499
14.8	Some miscellaneous solved examples	502
14.9	Travelling Salesman problem	514
15	**DECISION THEORY**	**529-548**
15.1	Introduction	529
15.2	Decision models	529
15.3	Steps of decision making process	530
15.4	Decision making situations	530
15.5	Decision making under certainty	530
15.6	Decision making under risk	531
15.7	Decision making under uncertainty	537
15.8	Posterior probability and Bayesian analysis	542
16	**GAME THEORY**	**549-590**
16.1	Introduction	549
16.2	Solution of a rectangular game in terms of mixed strategies	557
16.3	Properties of optimal mixed strategies	558
16.4	Solution of 2 × 2 games without saddle points	558
16.5	Solution of a Game by linear programming	564
16.6	Minimax theorem : Fundamental theorem of Game theory	565
16.7	Dominance property	571
16.8	Graphical method for the solution of 2 × n and m × 2 Games	578
16.9	Algebraic method for the solution of a general Game	586
17	**NETWORK ANALYSIS (PERT/CPM)**	**591-646**
17.1	Introduction	591
17.2	Objective of the Network analysis	591
17.3	Network	593

17.4	Characteristic of a network analysis	593
17.5	Error in Drawing a network	593
17.6	Construction of the network diagram	594
17.7	Methods of network analysis	599
17.8	Critical path analysis	602
17.9	Slack and float in network analysis	605
17.10	Critical Path	607
17.11	Project evaluation and review techniques (PERT)	620
17.12	Resource levelling and time cost trade-off analysis	628
17.13	Limitation of PERT	633
17.14	Comparison of CPM / PERT	633
18	**INVENTORY THEORY**	**647-688**
18.1	Introduction	647
18.2	Types of inventory	647
18.3	Meaning of inventory control	647
18.4	Need of the inventory control	647
18.5	Inventory cost	648
18.6	Types of inventory models	649
18.7	Economic lot size model	650
	Deterministic Model	
18.8	Model-1 : Economic lot size model with uniform rate of demand, infinite Production rate with no shortage	650
18.9	Model-2 : Economic lot size with different rate of demands in different cycles	653
18.10	Model-3 : EOQ production model; Economic lot size model with Uniform rate of demand, Finite rate of replenishment (Production), Having no shortage	655
18.11	Model-4: Fixed time model	656
18.12	Model-5 : Economic lot size model with uniform rate of demand, Infinite rate of production and with shortages which are to be fulfilled	658
18.13	Model-6 : Economic lot size model with uniform rate of demand, Finite rate of production and having shortages (which are to be fulfilled)	661
	Probabilistic Model	
18.14	Model-1 : Single period model with instantaneous (Discontinuous) Demand and time independent costs : No set-up cost model	671
18.15	Model-2 : No set-up cost model; Single period model with Uniform demand	674
18.16	Model-3 : The general single period model of profit maximization with time independent cost assumptions	676
18.17	Model-4: Probabilistic order-level system with constant lead time	678
18.18	Advantages of inventory control	686
19	**QUEUING THEORY**	**687-742**
19.1	Introduction	689
19.2	Queuing process	689
19.3	States of the system	692
19.4	Poisson process	693
19.5	More distributions	695

19.6	Distribution of service time	696
19.7	Classification of queue models	698
19.8	Model-1 [M/M/1 : (∞/FCFS)]	698
19.9	Model-2: General Erlang Queuing Model : M/M/1 : (∞/FCFS)	704
19.10	Model-3 : M/M/1 : (N/FCFS)	707
19.11	Model-4 :M/M/C : (∞/FCFS)	709
19.12	Model-5 M/M/C : (N/FCFS); N > c	713
19.13	Model-6 :$M/E_K/1$: (∞/FCFS)	715
19.14	Model-7: $M/E_K/1$: (1/FCFS)	719
19.15	Machine repair problem	720
20	**REPLACEMENT PROBLEMS**	**743-782**
20.1	Introduction	743
20.2	Replacement models and their solution	744
20.3	General approach to solve replacement problems	744
20.4	Concept of present value	745
20.5	Replacement when maintenance cost increases with time and the value of money remains same	746
20.6	Replacement of the item that deteriorates with time	748
20.7	Best replacement age of the items whose maintenance cost increase and value of money change with the time	756
20.8	Interval of optimum replacement	762
20.9	Present value for comparing replacement alternatives	763
20.10	Replacement of items that fail completely and are expensive to be replaced	765
20.11	Mortality and mortality table	765
20.12	Staffing problem	771
20.13	Life testing techniques	772
20.14	Group replacement method	773
21	**SIMULATION**	**783-800**
21.1	Introduction	783
21.2	Simulation	783
21.3	Types of simulation	784
21.4	Steps of simulation process	784
21.5	Advantages and disadvantages of simulation	784
21.6	Random numbers and pseudo-random numbers	785
21.7	Stochastic simulation	785
21.8	Techniques of generating pseudo-random numbers	785
21.9	Monte-Carlo simulation	789
21.10	Application of simulation in Operations Research	794
22	**DYNAMIC PROGRAMMING**	**801-830**
22.1	Introduction	801
22.2	Bellman's principle of optimality	801
22.3	Multistage decision problem	801
22.4	Characteristic of a dynamic programming problem	802

22.5 Solution of a multi-stage problem of dynamic programming with finite number of stages 802
22.6 Types of problems 803
22.7 Solution of L.P.P. by dynamic programming 817
22.8 Solution of inventory problem by a dynamic programming technique 823
22.8 Difference between dynamic and Linear programming problem 829

23 INFORMATION THEORY 831-858

23.1 Introduction 831
23.2 Communication process 831
23.3 Fundamental theorem of information theory 832
23.4 Statistical nature of communication system 832
23.5 Mathematical definition of information 833
23.6 Axiomatic approach to information 834
23.7 Measures of information 834
23.8 Measure of uncertainity : Entropy 837
23.9 Relations between entropies 841
23.10 Axioms for an entropy function 843
23.11 Uniqueness theorem 843
23.12 Channel capacity, efficiency and redundancy 848
23.13 Encoding 849
23.14 Shannon-Fano encoding procedure 851
23.15 Necessary and sufficient condition for noiseless coding 855

24 SEQUENCING 859-878

24.1 Introduction 859
24.2 General sequencing problem 859
24.3 Sequencing decision problem for n jobs and two machines 860
24.4 Johnson's method (for n-jobs 2-machines) 861
24.5 Sequencing decision problem of n-jobs and three machines 861
24.6 Sequencing decision problems for n-jobs and m-machines 862
24.7 Sequencing problem involving two jobs and m-machines 869
24.8 Graphical method 870

25 CLASSICAL OPTIMIZATION TECHNIQUES 879-936

25.1 Introduction 879
25.2 Maxima and minima of a function of several independent variables 888
25.3 Necessary condition for the existence of maxima or minima 888
25.4 Necessary condition for maxima and minima 889
25.5 Sufficient condition for maxima and minima: The Lagrange's condition 890
25.6 Maxima and minima of the function of three independent variables 899
25.7 Maxima and minima for a function of three independent variables : The Lagrange's condition 900
25.8 Lagrange's method of undetermined multipliers 904
25.9 Lagrangian multipliers method in non-Linear Programming 913
25.10 Sufficient conditions for maximum or minimum of the objective function 916

25.11	Solution of non-Linear programming problems when constraints are not equality constraints : Kuhn-Tucker conditions	923
26	**NON-LINEAR PROGRAMMING: SEARCH TECHNIQUES**	**937-982**
26.1	Introduction	937
26.2	Unconstrained minimization methods	937
26.3	Some direct method	938
26.4	Some more unconstrained direct search methods	950
26.5	Some Descent (or indirect) methods	951
26.6	Steepest Descent or Cauchy method	952
26.7	Fletcher-Reeves method	955
26.8	Constrained optimization problems	958
26.9	Characteristics of a constrained problem	958
26.10	Constrained minimization methods	958
26.11	Direct methods	958
26.12	Indirect methods	973
27	**NON-LINEAR PROGRAMMING : FORMULATION AND GRAPHICAL SOLUTIONS**	**983-1000**
27.1	Introduction	983
27.2	General non-linear programming problems (GNLPP)	983
27.3	Canonical form of non-linear programming problem	983
27.4	Mathematical formulation of non-linear programming problems	984
27.5	Graphical solution of a non-linear programming problem	987
28	**NON-LINEAR PROGRAMMING TECHNIQUES: QUADRATIC AND SEPARABLE PROGRAMMING**	**1001-1032**
28.1	Introduction	1001
28.2	Quadratic programming	1001
28.3	Kuhn-Tucker conditions for quadratic programming problem	1002
28.4	Wolfe's modified simplex method	1003
28.5	Beale's Method	1015
28.6	Separable programming	1026
28.7	Some general definitions related to Separable programming	1026
28.8	Piecewise linear approximation of non-linear functions	1026
28.9	Mixed integer approximation of Separable problems	1027
28.10	Validity of mixed integer approximation	1028
28.11	Method of solution of Separable programming problem	1028
■	**Appendix: Selected Tables**	**1033-1048**
■	**Bibliography**	**1049-1050**
■	**Index**	**1051-1054**
■	**Other Useful Books (by the same Author)**	**1055**
