<i>Foreword to the First Edition</i>	vii
<i>Preface to the Sixth Edition</i>	ix
<i>Preface to the First Edition</i>	xi

<b>1. Introduction</b>	<b>1</b>
Definition and basic forms—Components of a bridge—Classification—Importance of bridges—Historical development—Conceptual bridge design —Case studies—Standard specifications.	
<b>2. Investigation for Bridges</b>	<b>16</b>
Need for investigation—Selection of bridge site—Preliminary data to be collected—Preliminary drawings—Determination of design discharge—Linear waterway—Economical span—Location of piers and abutments—Vertical clearance above HFL—Subsoil exploration—Scour depth—Traffic projection—Investigation report—Choice of bridge type—Importance of proper investigation.	
<b>3. Standard Specifications for Road Bridges</b>	<b>37</b>
General—Indian Roads Congress Bridge Code—Width of carriageway —Clearances—Loads to be considered—Dead load—IRC standard live loads —Impact effect—Review of IRC loadings—Application of live loads on deck slabs—Wind load—Longitudinal forces—Centrifugal forces—Horizontal forces due to water currents—Buoyancy effect—Earth pressure—Temperature effects—Deformation stresses—Secondary stresses—Erection stresses —Seismic effects—Barge/Ship impact—Vehicle collision loads.	
<b>4. Standards for Railway Bridges</b>	<b>61</b>
General—Loads to be considered—Dead load—Live load—Dynamic effect—Forces due to curvature and eccentricity of track—Temperature effect—Frictional resistance of expansion bearings—Longitudinal forces—Racking forces—Forces on parapets—Wind pressure effect—Forces due to earthquake—Erection forces—Earth pressure on abutments.	
<b>5. General Design Considerations</b>	<b>73</b>
General—Structural concrete—Concrete mix design—Reinforcement—Elastic design coefficients—Curtailement of bars—Bond, anchorage and splice—Shear in reinforced concrete beams and slabs—Effective flange width of T-beams and L-beams—Minimum reinforcement in slabs and beams—Concreting operations—Prestressed concrete—Notation for detailing concrete bridges—Steel construction—Traffic aspects of highway bridges—Aesthetics of bridges— Relative costs of bridge components.	

- 6. Culverts** **108**  
 General—Reinforced concrete slab culvert—Example for R.C. slab culvert—Author's charts for design of deck slab of slab bridges—Skew slab culvert—Pipe culvert—Reinforced concrete box culverts—Submersible bridges.
- 7. Reinforced Concrete Bridges** **140**  
 General—T-beam bridges—Illustrative example of T-beam bridge—Hollow girder bridges—Balanced cantilever bridges—Continuous girder bridges—Rigid frame bridges—Arch bridges—Bow string girder bridge—Example of bow string girder bridge.
- 8. Prestressed Concrete Bridges** **185**  
 Types of prestressed concrete bridges—Types of prestressing—Pretensioning—Post-tensioning—Pretensioned prestressed concrete bridges—Post-tensioned prestressed concrete bridges—Illustrative example of design—Example of composite prestressed concrete superstructure—Erection of precast girders—Continuous bridges—Segmental cantilever construction—Stressed Ribbon bridge—Bonding of tendons—Precautions to be observed by the prestressed concrete bridge engineer—External post-tensioning.
- 9. Steel Bridges** **244**  
 General—Beam bridges—Plate girder bridges—Orthotropic plate decks—Box girder bridges—Truss bridges—Arch bridges—Cantilever bridges—Cable stayed bridges—Suspension bridges—Cable vibration.
- 10. Masonry and Composite Bridges** **275**  
 Masonry arches—Analysis of arches—Composite bridges—Analysis of composite section—Shear connectors—Design of composite beams.
- 11. Temporary and Movable Bridges** **287**  
 Temporary bridges—Timber bridges—Temporary causeways—Military bridges—Floating/Pontoon bridges—Movable bridges.
- 12. Substructure** **299**  
 Definition—Pier and abutment caps—Materials for piers and abutments—Piers—Forces due to wave action and collision—Example of design of pier—Abutments—Example of design of abutment—Backfill behind abutment.
- 13. Foundations** **317**  
 General—Scour at abutments and piers—Grip length—Types of foundations—Shallow foundations—Pile foundations—Well foundations—Relative merits of piles and wells—Pneumatic caissons—Cofferdams for bridge piers—Box caissons.
- 14. Bearings, Joints and Appurtenances** **343**  
 Importance of bearings—Bearings for slab bridges—Bearings for girder bridges—Expansion bearings—Fixed bearings—Elastomeric bearings—Elastomeric pot bearings—Bearings for skew bridges—Joints—Expansion joints—Appurtenances—Handrails—Footpaths on bridges—Drainage arrangements—Wearing course—Approach slab—River training works.

<b>15. Construction and Maintenance</b>	<b>378</b>
Construction engineering—Construction method affects total cost—Quality assurance for bridge projects—Bridge construction inspection—Construction of short span bridges—Steel bridge construction—Construction of continuous concrete bridges—Formwork and falsework for concrete bridges—Numbering of bridges—Bridge management system.	
<b>16. Lessons from Bridge Failures</b>	<b>400</b>
Major causes—Flood and scour failures—Brittle fracture—Barge/Ship impact—Falsework failures—Erection errors—Design deficiencies—Earthquake effects—Failures due to wind—Fatigue—Corrosion—Partial failures—Summary.	
<b>17. Recent Trends in Bridge Engineering</b>	<b>408</b>
General—Urban flyovers and elevated roads—Extradosed bridges—Integral bridges—Durability considerations—High performance concrete—High performance steel—Limit states method of design—Advanced construction methods.	
<b>Appendices</b>	
A - Effect of concentrated loads on deck slabs	<b>419</b>
B - Load distribution methods for concrete bridges	<b>431</b>
C - Statistics of record bridges	<b>454</b>
D - Chronology of selected developments of bridges	<b>460</b>
E - Miscellaneous data	<b>463</b>
F - Review questions	<b>468</b>
<b>Index</b>	<b>477</b>
