Preface to the Sixth Edition	vii
Preface to the First Edition	ix
List of Symbols	xvii
1. MATERIALS CONCRETE AND PRESTRESSED CONCRETE STRUCTURES	1
1.1 Aggregates and Sand in Concrete	1
1.2 Portland Cement	6
1.3 Principal Compounds of Portland Cement	6
1.4 Physical Properties of Portland Cement	7
1.5 Types of Portland Cements	11
1.6 Pozzolanas and Admixtures	15
1.7 Water Quality in Cement Concrete Construction	17
1.8 Introduction to Concrete	18
1.9 Important Properties of Concrete	26
1.10 Workability of Concrete	26
1.11 Curing of Concrete	30
1.12 Shrinkage and Creep of Concrete	33
1.13 Strength of Concrete	35
1.14 Durability of Concrete Structures	43
1.15 Durability Design Considerations	46
1.16 Fire Protection Specifications	51

1.17	Quality Assurance in Concrete Structures	52
1.18	Non-destructive Testing of Concrete Structures	57
1.19	Definition	61
1.20	Stress Distribution	64
1.21	Profile of Tendons	67
1.22	Load Balancing Method	71
1.23	Basic Phases of Loading in Prestressed Construction	78
1.24	Materials	79
2.	PRESTRESSING SYSTEM AND LOSSES OF PRESTRESS	86
2.1	Classification	86
2.2	External or Internal Prestressing System	86
2.3	Linear and Circular Prestressing	87
2.4	Pre-tensioning System	87
2.5	Post-tensioning System	88
2.6	Partial Prestressed Concrete	88
2.7	Classification Based on Methods of Prestressing	89
2.8	Loss of Prestress	91
2.9	Loss of Prestress due to Creep in Steel	92
2.10	Loss of Prestress due to Shrinkage of Concrete	92
2.11	Loss of Prestress due to Creep in Concrete	92
2.12	Loss of Prestress due to Steam Curing	92
2.13	Loss of Prestress due to Elastic Shortening of the Member	93
2.14	Loss of Prestress due to Anchorage Take-up	93
2.15	Loss of Prestress due to Bending of the Member	93
2.16	Loss of Prestress due to Friction	94
2.17.	Terminology	101
3.	WORKING STRESS DESIGN OF SIMPLE BEAMS	106
3.1	Introduction	106
3.2	Critical Load Conditions	106
3.3	Flexural Design Criterion	107
3.4	Permissible Stresses	112
3.5	Axially Prestressed Members	115
3.6	Design of Prestressing Cable for a Given Cross Section	118
3.7	Dimensionless Design Variables	129

3.8	Solution of the Equations	133
3.9	Properties of Idealised Sections	135
3.10	Design Procedure Based on Flexure	137
3.11	Minimum Weight Design by Computer	144
3.12	Design by Load Balancing Method	148
3.13	Multiple Stage Prestressing	152
4.	PRESTRESSED CONCRETE COMPOSITE BEAMS	158
4.1	Introduction	158
4.2	Allowable Stress Considerations	159
4.3	Non-dimensionalised Allowable Stress Equations	162
4.4	Solution of the Governing Equations	165
4.5	Ranges of Non-dimensionalised Parameters	166
4.6	Shrinkage Stresses	167
5.	CONTINUOUS BEAMS	176
5.1	Introduction	176
5.2	Analysis of Two Span Beam	178
5.3	Analysis of Two Span Continuous Beam with Eccentricities at Outer Supports	182
5.4	Fixed End Bending Moments	184
5.5	Application of Moment Distribution Procedure	187
5.6	Continuous Beams with Variable Section	192
5.7	Design of Continuous Beams	196
5.8	Load Balancing Method	203
6.	MISCELLANEOUS STRUCTURAL MEMBERS	209
6.1	Introduction	209
6.2	Compression Members	209
6.3	Tension Members	216
6.4	Prestressed Concrete Pavements	223
7.	LIMIT STATES DESIGN OF BEAMS	225
7.1	Introduction	225
7.2	Types of Prestressed Concrete Structures	232
7.3	Strength Limit State in Flexure	233
7.4	Limit State of Strength-Shear Capacity	239

7.5	Design for Limit State of Strength in Shear	241
7.6	Design for Limit State of Strength Torsion	242
7.7	Limit State Strength at Transfer Condition	245
7.8	Flanged Sections and Their Moment Capacity	246
7.9	Limit State of Serviceability—Allowable Stresses	248
7.10	Limit State of Cracking	250
7.11	Limit State of Deflection	250
7.12	Durability Limit State	252
7.13	Design Procedure	253
7.14	Design of Short Span Beams	255
7.15	Short Span Axially Prestressed Beams	271
7.16	Medium Span Beams	282
7.17	Long Span Beams	295
8.	ULTIMATE LOAD DESIGN OF PRESTRESSED CONCRETE BEAMS	312
8.1	Introduction	312
8.2	Resisting Moment Capacity of a Section	313
8.3	Moment Capacity of a Section Initiated by Yielding of Tension Steel (Tension Failure)	313
8.4	Ultimate Moment Capacity in Primary Compression	318
8.5	Moment Capacity of Unbounded Construction	321
8.6	Load Factors	321
8.7	Ultimate Strength Design of Rectangular Cross Sections	323
8.8	Design of Flanged Sections	326
8.9	Principal Tensile Stress	329
8.10	Failure Due to Shear	331
8.11	Compressive Strength of Concrete Subjected to Combined Bending and Shear	332
8.12	Ultimate Bending Moment under Combined Moment and Shear (Moment Shear Failure)	334
8.13	Ultimate Moment under Combined Bending and Shear of I-girder	335
8.14	Location of Failure Section	337
8.15	Suggestions from Experimental Investigations	339
9.	LIMIT STATE DESIGN OF PARTIALLY PRESTRESSED CONCRETE BEAMS	343
9.1	Introduction	343

9.2	Balanced Moment Capacity of Rectangular Sections	344
9.3	Moment Capacity of Flanged Sections	346
9.4	Design for Shear and Serviceability	348
9.5	Design Examples	349
9.6	Comparison of Design Detail by Different Methods	374
10.	DESIGN OF PRESTRESSED CONCRETE SLABS	378
10.1	Introduction	378
10.2	One-way Slab	378
10.3	Two-way Slab	384
10.4	Prestressed Concrete Beam and Slab Construction	388
10.5	Prestressed Concrete Flat Slab	388
11.	DESIGN OF FOLDED PLATES AND SHELL STRUCTURES	395
11.1	Introduction	395
11.2	Design of Folded Plates	395
11.3	Introduction to Prestressed Concrete Shells	400
11.4	Design of Cylindrical Tanks	400
11.5	Dome-ring Construction	405
11.6	Introduction to Prestressed Concrete Cylindrical Shell	416
11.7	Design of Cylindrical Shell Using <i>ASCE</i> Manual 31	416
11.8	Design of Cylindrical Shells by Using Design Coefficients	438
11.9	Some Recommended Specifications for Shell and Folded Plate Structures	443
12.	BOND IN PRESTRESSED CONCRETE	445
12.1	Introduction	445
12.2	Bond in Pre-tensioned Construction	445
12.3	Bond in Post-tensioned Construction	449
13.	ANCHORAGE OF PRESTRESSING CABLES	452
13.1	Post-tensioned Construction	452
13.2	Prestressing Cable at the Centroidal Axis	453
13.3	Symmetric Multiple Cables Causing Axial Thrust	458
13.4	Cable with Eccentricity	460
13.5	Inclined Prestressing Cable	461
13.6	Spalling Stresses	462

14. SOME POINT OF INTEREST IN PRESTRESSED CONCRETE CONSTRUCTION	464
14.1 High Tensile Steels	464
14.2 Concrete	465
14.3 Bond Failure	468
14.4 Fire Resistance	468
14.5 Handling and Transportation	469
15. DESIGN OF PRESTRESSED CONCRETE BRIDGE	471
15.1 Introduction	471
15.2 Materials for Prestressed Concrete Bridge	472
15.3 Permissible Stresses (N/mm ²)	473
15.4 Limiting Requirements	473
15.5 Design Example	474
Appendix A—Tables	527
Table 1 Values of Δ for Full Stress Condition	
Table 2 Sectional Properties	
Table 3 Fixed and Moments Due to Prestressing Force	
Table 4 Membrane Forces and Displacements in Simply Supported Cylindrical Shells; Loads Uniformly Distributed Along the Length of the Barrel	
Table 5 Membrane Forces and Displacements in Simply Supported Cylindrical Shells; Loads Varying from Zero at the End to Maximum at the Middle	
Table 6 Symmetrical Edge Loads on Simply Supported Cylindrical Shells (Force Coefficients)	
Table 7 Symmetrical Edge Loads on Simply Supported Cylindrical shells (Displacement of Edge at $\phi = 0$) (Deformation Coefficients)	
Table 8 Edge Loads on Simply Supported Cylindrical shell	
Appendix B — Objective Questions on Prestressed Concrete Structures	596
Appendix C — Questions in Prestressed Concrete Structures	625
References	661
Index	680
