PREFACE PAGE ix

Part One Physical Pharmaceutics

1 Units	3	5 Disperse systems	54
2 Solutions	7	6 Kinetics	89
3 Phase equilibria	17	7 Rheology	115
4 Surface and interfacial phenomena	33		

Part Two Pharmaceutical Technology

8 Formulation and development	131	17 Size separation	192
9 Packaging	133	18 Mixing	200
10 Introduction to industrial processing	142	19 Powder flow and compaction	211
11 Fluid flow	146	20 Filtration	234
12 Heat transfer	149	21 Centrifugation	245
13 Mass transfer	162	22 Extraction	251
14 Evaporation	164	23 Distillation	262
15 Particle size	174	24 Drying	270
16 Size reduction	183	25 Materials of pharmaceutical plant construction	282

Part Three Biological Pharmacy

26 Outline of the development of microbiology	289	31 Antiseptics, disinfectants and preservatives	353
27 Fundamentals of microbiology	298	32 Antibiotics	366
28 Bacteriological methods	317	33 Immunology	375
29 Dynamics of antimicrobial action	333	34 Blood and related products	414
30 Evaluation techniques in microbiology	341		

Part Four Ligatures and Sutures

35 Surgical ligatures and sutures	429
-----------------------------------	-----

Part Five Radioactive Isotopes

36 Radioactive isotopes	435
-------------------------	-----

Appendix

Forces between molecules, ions and atoms	455
--	-----
