

Preface to the Sixteenth Edition v

1. INTRODUCTION 1–8

Introduction; History of pharmacognosy: Period 1934–1960; Antibiotic age; Progress from 1960 onwards. Technical products; Pharmaceutical aids; Phytochemistry; Importance of phytochemicals; Discovery of new medicines from plants – Nutraceuticals use versus drug development.

2. ANIMAL AND MARINE PRODUCTS 9–19

Animal products; Marine organisms; Antiviral compounds; Antitumour compounds; Antiparasitic compounds; Anticoagulants; Antimicrobial agents; Anti-inflammatory compounds; Prostaglandins; Proteins; Agrochemical uses; Dinoflagellate and diatom-derived shellfish poisoning; Toxins; Vitamins; Enzymes from marine organisms

3. INDIGENOUS SYSTEMS OF MEDICINE ALIAS COMPLEMENTARY AND ALTERNATIVE MEDICINE 20–28

Ayurveda and Ayurvedic system of medicine; Basics of Ayurveda; Pharmacological perception; Unani system of medicine (Unani Tibb)

4. ADULTERATION AND DRUG EVALUATION 29–31

Adulteration; Evaluation of drugs and natural products

5. EVALUATION OF NATURAL PRODUCTS AND SIGNIFICANCE OF PHARMACOPOEIAL STANDARDS 32–39

Identity; Purity; Ash testing; Acid-insoluble ash testing; Quality or activity; Infrared spectroscopy (FTIR); Microbiological assay; Bacteria testing; Mould and yeast testing; Thin layer chromatography; Gas chromatography; Significance of pharmacopoeial standards

6. PLANT TISSUE CULTURE TECHNIQUES	40–51
History; Introduction; General laboratory requirements; Culture media; Media preparation; Callus cultures; Callus induction; Subculture and maintenance; Suspension cultures	
7. BIOGENESIS OF SECONDARY PRODUCTS	52–65
Basic biogenetic pathways; Light reaction and dark reaction; Glycolysis; Oxidation of pyruvic acid; The Shikimic acid pathway; The Mevalonic acid pathway; Methods utilized in investigating biogenesis studies	
8. CLASSIFICATION OF DRUGS	66–67
Various systems of classification of natural drugs	
9. PHARMACEUTICAL BIOLOGY	68–89
Morphological features of plants; Typical plant cell; Cell differentiation; Parenchyma and its modifications; Epidermis; Stomata; Epidermal trichomes; Sclerenchyma; Sclereids; Xylem; Phloem; Cell contents (cell inclusions); Starch; Calcium oxalate; Proteins	
10. PARTS OF PLANTS	90–99
Leaves; Barks; Seeds; Fruits; Flowers; Subterranean parts; Wood	
11. CARBOHYDRATES AND RELATED DRUGS	100–131
Phytochemistry: Carbohydrates; Sugars (Saccharides); Honey; Polysaccharides; Starch; Gums and mucilages; Gum acacia (Gum Arabic); Indian acacia; Tragacanth; Sterculia gum; Katira gum; Agar; Ispaghula; Ispaghula husk; Linseed; Bael; Pectins; Sodium alginate; Cellulose; Tamarind	
12. PROTEINS	132–136
General account; Gelatin; Yeast	
13. ENZYMES	137–146
Introduction; Diastase; Malt diastase; Papaya / papain; Pepsin; Trypsin; Pancreatin	
14. FIXED OILS, FATS AND WAXES – LIPIDS	147–174
General account; Biosynthesis; Castor oil; Sesame oil; Arachis oil; Chaulmoogra oil; Almond oil; Corn oil (Maize oil); Coconut oil; Palm oil; Mustard oil; Soya oil; Safflower oil; Sunflower oil; Olea europaea; Kokum; Shark liver oil; Cod liver oil; Beeswax; Lanolin; Fixed oil-containing plants; Source and constituents of fixed oils	
15. VOLATILE OILS	175–234
Essential oils; Ethereal oils; Turpentine oil; Rectified turpentine oil; Alcohol-containing volatile oils: Mentha oil; Peppermint oil; Menthol; Aldehyde-containing	

volatile oils: Cinnamon bark; Cassia bark; Lemon grass oil; Lemon peel; Bitter lemon peel; Bitter orange peel; Dried orange peel; Saffron; Ketone-containing volatile oils; Umbelliferous fruits; Fennel; Coriander; Dill; Indian dill; Caraway; Cumin; Anise; Camphor; Pudina; Jatamansi; Banafsha; Buchu leaves; Phenol-containing volatile oils: Clove; Tulsi. Volatile oils containing phenolic ethers: Nutmeg; Mace; Calamus. Volatile oils containing oxides: Eucalyptus oil; Chenopodium oil; Cardamom. Volatile oils containing esters: Valerian; Indian valerian; Garlic; Pyrethrum. Volatile oil containing lactones: Santonica; Saussurea. Insects: Cantharides; Mylabris

16. RESINS235–281

General account; Colophony; Balsam; Balsam Tolu; Peru balsam; Benzoin: Siam benzoin; Storax; Copaiba; Asafoetida; Myrrh; Male fern; Vidang; Indian podophyllum; Cannabis; Kaladana; Jalap; Brazilian jalap; Indian jalap; Ipomoea; Scammony resin; Colocynth; Cucurbitacins; Ginger; Turmeric; Java turmeric; Kachura; Galang; Capsicum; Long pepper; Piplamul

17. GLYCOSIDES282–380

General account; Aglycones; Sugars in the glycosides; Cardiac glycosides: Distribution in nature; Biochemical mechanism of action; Sugars in cardioactive glycosides; Digitalis leaves; Digitalis lanata leaf; Strophanthus; Scilla; Indian squill; Anthracenosides (Anthracene/Anthraquinone glycosides): Anthracenosides-containing drugs: Senna leaves; Tinnervelly senna leaves; Senna pods; Rhubarb; Rhubarb I.P.; Aloes; Chrysarobin; Cascara bark; Saponins. Sapogenins. Steroid saponins: Dioscorea; Shatavari (Shatavar); Ginseng; Ginkgo biloba; Fenugreek; Gokhru. Triterpene saponins: Glycyrrhiza; Quillaia bark; Brahmi; Centella asiatica; Bacopa moniera; Senega; Indian senega; Arjuna bark; Cyanogenetic glycosides: Bitter almond; Wild cherry bark. Isothiocyanate glycosides: Mustard; White mustard. Bitter glycosides: Gentian; Chirata; Picrorrhiza; Kalmegh; Quassia. Some other triterpenoid drugs: Rasna; Pluchea lanceolata; Vanda roxburghii. Coumarin glycosides. Furanocoumarins: Bavchi; Ammi majus; Ammi visnaga. Flavone glycosides: Rutin; Hesperidin. Alcohol and other glycosides: Salicin; Arbutin. Monotroposide

18. TANNINS381–390

General account; Condensed tannins: Pale catechu; Black catechu; Ashoka bark. Hydrolysable tannins: Galls; Tannic acid; Myrobalan; Behra; Amla; Ellagic acid

19. ALKALOIDS391–490

General account; Classification of alkaloids. Pyrrolidine, Pyridine and Piperidine alkaloids: Tobacco alkaloids: Nicotine. Tobacco smoke alkaloids: Peppers (Black pepper and long pepper); Lobelia; Lobelia I.P. Tropine alkaloids: Belladonna herb; Indian belladonna; Belladonna root; Indian belladonna roots I.P.; Hyoscyamus;

Egyptian henbane; Stramonium; Datura herb I.P.; Withania; Coca leaves. Quinoline and isoquinoline alkaloids: Cinchona bark; Ipecacuanha; Calumba; Opium. Indole alkaloids: Ergot. Aminopropanol and peptide type of ergot alkaloids. Clavine type of ergot alkaloids. Rauwolfia; Groupings of Rauwolfia alkaloids; Nux vomica; Catharanthus; Physostigma. Quinazoline alkaloids: Vasaka leaves. Diterpene alkaloids: Aconite. Steroid alkaloids: Kurchi bark. Alkaloidal amines: Ephedra, Ephedra sinica; Ephedra I.P.; Colchicum seed; Colchicum corm; Indian colchicum seed; Indian colchicum corm. Drugs with unknown alkaloidal structures: Punarnava; Shankhpushpi.

20. ANTIBIOTICS	491–508
Introduction. β -Lactam antibiotics: Penicillins. Cephalosporins. Aminoglycosides. Tetracyclines. Macrolides. Lincomycins. Polypeptides. Other (unclassified) antibiotics	
21. FIBRES, SURGICAL DRESSINGS AND SUTURES	509–516
Fibres; Absorbent cotton; Jute; Flax; Hemp; Regenerated cellulose; Viscose rayon; Silk; Wool; Nylon; Terylene; Orlon; Polythene; Surgical dressings. Sutures: Absorbable sutures; Surgical catgut; Kangaroo tendons; Synthetic polyesters; Non-absorbable sutures; Silkworm gut; Nylon; Linen	
22. MISCELLANEOUS DRUGS	517–533
Kaolin; Tar I.P.; Achyranthus aspera; Azadirachta indica; Butea monosperma; Celastrus paniculata; Commiphora mukul; Cyperus rotundus; Eclipta alba; Gymnema sylvestre; Plumbago zeylanica; Semecarpus anacardium; Tinospora cardifolia; Tylophora indica	
23. TAXONOMIC CLASSIFICATION OF THE DRUGS	534–539
24. CHEMICAL CLASSIFICATION OF THE DRUGS	540–542
Index	543–565
