List of Symbols and Abbreviations

xv

CHAPTER 1: Systems Components and their Representation

1.1–1.128

- 1.1 Control System: Terminology and Basic Structure 1.1
 - 1.1.1 Open Loop System 1.1
 - 1.1.2 Closed Loop System 1.1
 - 1.1.3 Feed Forward and Feedback Control Theory 1.2
 - 1.1.4 Examples of Control Systems 1.4
- 1.2 Mathematical Models of Control System 1.7
- 1.3 Electrical Transfer Function Models 1.8
 - 1.3.1 Transfer Function of Armature Controlled DC Motor 1.8
 - 1.3.2 Transfer Function of Field Controlled DC Motor 1.11
- 1.4 Mechanical Transfer Function Models 1.14
 - 1.4.1 Mechanical Translational Systems 1.14
 - 1.4.2 Mechanical Rotational Systems 1.22
- 1.5 Electrical Analogous of Mechanical Translational Systems 1.27
- 1.6 Electrical Analogous of Mechanical Rotational Systems 1.42
- 1.7 Block Diagram Models 1.51
- 1.8 Signal Flow Graph Models 1.72
- 1.9 Automatic Control System 1.91
 - 1.9.1 DC Servo System 1.93
 - 1.9.2 AC Servo System 1.93
- 1.10 Components of Control System 1.94
 - 1.10.1 Potentiometer 1.94
 - 1.10.2 Servomotor 1.96
 - 1.10.3 DC Servomotor 1.97
 - 1.10.4 AC Servomotor 1.99
 - 1.10.5 Synchronous 1.104
- 1.11 Multivariable Control Systems 1.109
- 1.12 Short-Answer Questions 1.112
- 1.13 Exercises 1.119

CHAPTER 2: Time Response Analysis

2.1–2.82

- 2.1 Time Response 2.1
 - 2.1.1 Order of a System 2.1
 - 2.1.2 Impulse Response 2.2
 - 2.1.3 Time Response from Transfer Function of the System 2.2
 - 2.1.4 Transient and Steady State Response 2.3
 - 2.1.5 Types of Test Signals (Time Domain Specifications) 2.4
- 2.2 First Order System 2.6

- 2.2.1 Response of First Order System for Unit Step Input 2.6
- 2.2.2 Measures of Performance of Standard First Order System 2.7
- 2.3 Second Order System 2.7
 - 2.3.1 Response of Undamped Second Order System for Unit Step Input 2.8
 - 2.3.2 Response of Underdamped Second Order System for Unit Step Input 2.10
 - 2.3.3 Response of Critically Damped Second Order System for Unit Step Input 2.12
 - 2.3.4 Response of Over Damped Second Order System for Unit Step Input 2.13
 - 2.3.5 Measures of Performance of a Standard Second Order System 2.15
(Time Domain Specifications)
 - 2.3.6 Expression for Time Domain Specifications 2.16
- 2.4 Effect on an Additional Zero and an Additional Pole 2.20
- 2.5 Review of Partial Fraction Expansion 2.20
- 2.6 Steady State Error 2.36
 - 2.6.1 Static Error Constants (or Steady Error Constants) 2.37
 - 2.6.1 System Type Number 2.37
 - 2.6.3 Steady State Error When the Input is Unit Step Signal 2.37
 - 2.6.4 Steady State Error When the Input is Unit Ramp Signal 2.38
 - 2.6.5 Steady State Error When the Input is Unit Parabolic Signal 2.39
 - 2.6.6 Generalized Error Coefficients 2.40
 - 2.6.7 Evaluation of Generalized Error Coefficients 2.42
 - 2.6.8 Correlation between Static and Dynamic Error Coefficients 2.43
 - 2.6.9 Alternate Method for Generalized Error Coefficients 2.44
- 2.7 PID Control 2.52
 - 2.7.1 Components of Automatic Control System 2.52
 - 2.7.2 Controllers 2.53
 - 2.7.3 Response with P, PI, PD and PID Controllers 2.57
- 2.8 Analytical Design of PD, PI and PID Control Systems 2.60
 - 2.8.1 Procedure for Design of PD/PI/PID Controller 2.62
- 2.9 Short-Answer Questions 2.67
- 2.10 Exercises 2.78

CHAPTER 3: Frequency Response and System Analysis

3.1–3.116

- 3.1 Frequency Response 3.1
 - 3.1.1 Open Loop Frequency Response 3.2
 - 3.1.2 Closed Loop Frequency Response 3.2
- 3.2 Performance Specification in Frequency Domain 3.3
- 3.3 Frequency Response of Standard Second Order System 3.4
 - 3.3.1 Correlation between Time and Frequency Response 3.7
- 3.4 Bode Plot 3.9
 - 3.4.1 Basic Factors of $G(j\omega)$ 3.10
 - 3.4.2 Procedure for Magnitude Plot of Bode Plot 3.17
 - 3.4.3 Procedure for Phase Plot of Bode Plot 3.19
 - 3.4.4 Determination of Gain Margin and Phase Margin from Bode Plot 3.19
 - 3.4.5 Gain Adjustment in Bode Plot 3.20
- 3.5 Polar Plot (Nyquist Plot) 3.37
 - 3.5.1 Determination of Gain Margin and Phase Margin from Polar Plot 3.40
 - 3.5.2 Gain Adjustment using Polar Plot 3.41
- 3.6 Control System Design using Compensators 3.62
- 3.7 Design of Compensators using Bode Plot 3.63
- 3.8 Cascade Lead Compensation 3.64
 - 3.8.1 s-Plane Representation of Lead Compensator 3.64
 - 3.8.2 Realization of Lead Compensator using Electrical Network 3.65

- 3.8.3 Frequency Response of Lead Compensator 3.66
- 3.8.4 Procedure for Design of Lead Compensator using Bode Plot 3.68
- 3.9 Lag Compensation 3.80
 - 3.9.1 s-Plane Representation of Lag Compensator 3.80
 - 3.9.2 Realization of Lag Compensator using Electrical Network 3.81
 - 3.9.3 Frequency Response of Lag Compensator 3.81
 - 3.9.4 Procedure for the Design of Lag Compensator using Bode Plot 3.84
- 3.10 Lag-Lead Compensation 3.94
 - 3.10.1 s-Plane Representation of Lag-Lead Compensator 3.94
 - 3.10.2 Realization of Lag-Lead Compensator using Electrical Network 3.94
 - 3.10.3 Frequency Response of Lag-Lead Compensator 3.96
 - 3.10.4 Procedure for Design of Lag-Lead Compensator using Bode Plot 3.97
- 3.11 Short-Answer Questions 3.104
- 3.12 Exercises 3.115

CHAPTER 4: Concepts of Stability Analysis**4.1–4.102**

- 4.1 Concept of Stability 4.1
 - 4.1.1 Definitions of Stability 4.1
 - 4.1.2 Impulse Response of a System 4.1
 - 4.1.3 Bounded-Input Bounded-Output (BIBO) Stability 4.2
 - 4.1.4 Location of Poles on s-Plane for Stability 4.3
- 4.2 Routh Stability Criterion 4.8
 - 4.2.1 Construction of Routh Array 4.9
- 4.3 Relative Stability 4.26
 - 4.3.1 Gain Margin and Phase Margin 4.27
- 4.4 Root Locus Concept 4.32
 - 4.4.1 Guidelines for Sketching Root Locus 4.35
- 4.5 Mathematical Preliminaries for Nyquist Stability Criterion 4.67
- 4.6 Nyquist Stability Criterion 4.70
 - 4.6.1 Procedure for Investigating Stability using Nyquist Criterion 4.73
- 4.7 Short-Answer Questions 4.96
- 4.8 Exercises 4.100

CHAPTER 5: Control System Analysis using State Variable Methods**5.1–5.114**

- 5.1 State Space Analysis 5.1
 - 5.1.1 State Variable Representation 5.1
 - 5.1.2 State Model 5.2
 - 5.1.3 State Diagram 5.4
- 5.2 Conversion of State Variable Models to Transfer Functions 5.6
- 5.3 Conversion of Transfer Function to State Variable Models 5.11
 - 5.3.1 State Space Representation using Phase Variables 5.11
 - 5.3.2 State Space Representation using Canonical Variables 5.21
 - 5.3.3 Transformation of State Model 5.29
- 5.4 Solution of State Equations 5.35
 - 5.4.1 Solution of State Equations in Time Domain 5.35
 - 5.4.2 Solution of State Equations in Laplace Transform 5.36
- 5.5 Concepts of Controllability and Observability 5.42
- 5.6 Stability of Linear Systems 5.49
- 5.7 Equivalence between Transfer Function and State Variable Representations 5.51

- 5.8 Discrete Time Signals and Systems 5.56
 - 5.8.1 Discrete Time Signal 5.56
 - 5.8.2 Discrete Time System 5.58
 - 5.8.3 Transfer Function of Linear Discrete Time System 5.60
- 5.9 State Space Representation of Discrete Time Systems 5.61
(State Space Representation of Digital Control Systems)
 - 5.9.1 State Diagram of Discrete Time System 5.64
 - 5.9.2 Phase Variable Form of State Model 5.65
 - 5.9.3 Canonical Form of State Model 5.67
 - 5.9.4 Transfer Function of Discrete Time System from State Model 5.69
 - 5.9.5 Solution of Discrete Time State Equations 5.70
- 5.10 Discrete (or Digital) Control System Design via Pole Placement by State Feedback 5.80
- 5.11 Short-Answer Questions 5.94
- 5.12 Exercises 5.108

APPENDICES**A.1–A.13**

- Appendix 1: Laplace Transform Pairs and Properties A.1
- Appendix 2: Roots of Algebraic Equation by Lin's Method A.3
- Appendix 3: Matrix Fundamentals A.4
- Appendix 4: Z-Transform A.7

INDEX**1.1– 1.5**
