|------------------------------------------------------------|-----|
| <i>Foreword</i> by Avinash Supe                            | v   |
| <i>Preface</i>                                             | vii |
| 1. Introduction                                            | 1   |
| 2. Normal ECG                                              | 2   |
| 3. How to read ECG                                         | 3   |
| 4. Hypokalemia                                             | 5   |
| 5. Hyperkalemia                                            | 6   |
| 6. Arrhythmia                                              | 7   |
| 7. Sinus tachycardia                                       | 8   |
| 8. Sinus bradycardia                                       | 9   |
| 9. Paroxysmal supraventricular tachycardia                 | 10  |
| 10. Atrial flutter                                         | 11  |
| 11. Atrial fibrillation                                    | 12  |
| 12. Idioventricular and Accelerated idioventricular rhythm | 14  |
| 13. Ventricular tachycardia                                | 16  |
| 14. Ventricular fibrillation                               | 18  |
| 15. Extrasystole                                           | 19  |
| 16. Atrioventricular block                                 | 21  |
| 17. Pre-excitation syndrome                                | 24  |
| 18. Bundle branch block                                    | 26  |
| 19. Chamber hypertrophy                                    | 28  |
| 20. Ischemic heart disease                                 | 31  |
| 21. Pacemaker                                              | 33  |
| <i>Index</i>                                               | 35  |
