Preface	ix
Acknowledgements	xii
1 Instrumental methods in the development and use of medicines	1
Introduction, 1; product characterisation for drug development, 1; product development, 4; production and pharmacopoeial controls, 5; drug metabolism and pharmacokinetics, 7	
2 General physical methods	9
Density, 9; solubility, 14; molecular weight, 17; refractometry, 23; optical activity, 30; viscosity, 39; surface tension, 45	
3 Analysis of drugs and excipients in the solid state	52
Introduction, 52; particle size analysis, 52; methods of particle size analysis, 58; thermal methods of analysis, 67; X-ray powder diffraction 78	
4 Chromatography	85
Introduction, 85; column chromatography, 86; paper chromatography, 106; thin-layer chromatography, 115; gas chromatography, 128; high performance liquid chromatography, 157	
5 Electrochemical methods	175
Introduction, 175; conductimetric titrations, 175; potentiometry, 183; voltammetry and coulometry, 208; electrochemical detection in HPLC, 247	
6 The basis of spectrophotometry	255
Introduction, 255; atomic spectra, 257; molecular spectra, 259; instrumentation, 264; spectrophotometers, 272	

7 Ultraviolet-visible absorption spectrophotometry	275
Introduction, 275; quantitative spectrophotometric assay of medicinal substances, 278; assay of substances in multicomponent samples, 281; optimum conditions for spectrophotometric measurements, 307; structural analysis, 315; experiments in ultraviolet-visible spectrophotometry, 325	
8 Atomic emission spectrometry and atomic absorption spectrophotometry	338
Atomic emission spectrometry, 338; atomic absorption spectrophotometry, 346	
9 Spectrofluorimetry	358
Introduction, 358; Quantitative aspects, 361	
10 Infrared spectrophotometry	379
Introduction, 379; interpretation of infrared spectra, 383; quantitative analysis, 390; routine maintenance, 405	
11 Nuclear magnetic resonance spectroscopy	408
Introduction, 408; practical considerations, 415; chemical shift, 418; spin-spin coupling, 432; applications, 446; investigation of dynamic properties of molecules, 447; quantitative analysis, 456; carbon-13 NMR (CMR) spectroscopy, 461	
12 Mass spectrometry	468
Introduction, 468; practical considerations, 473; combined gas chromatography-mass spectrometry (GC/MS), 474; high performance liquid chromatography-mass spectrometry (HPLC/MS), 477; chemical ionisation mass spectrometry (CIMS), 478; field ionisation (FI) mass spectrometry, 480; fast atom bombardment (FAB) mass spectrometry, 482; applications, 482	
13 Radiochemistry and radiopharmaceuticals	501
Introduction, 501; fundamentals of radioactivity, 501; properties of radiation, 505; radiation protection, 506; measurement of radioactivity, 509; radiopharmaceuticals and radionuclide generators, 513; quality control of radiopharmaceuticals, 516; radiochemical methods in analysis, 519	

14 The application of spectroscopic techniques to structural elucidation 535

Introduction, 535; aids to spectral interpretation, 535; exercises, 538; solutions, 566

Index 588
