

Contents

<i>Contributors</i>	v
<i>Foreword</i>	vii
<i>Preface</i>	ix
1. Potentiality of Signalling Molecules in Crop Productivity Under Harsh Environment	1–9
2. Metabolic Implications of Proline in Plants Against Abiotic Environmental Stresses	10–20
3. Molecular Approach of Auxin Functionality to Enhance Yield Potential of Crops	21–55
4. Role of Cytokinin Diversity in Plant Developmental Programme	56–94
5. Triacontanol: An Emerging Plant Hormone for Crop Yield Improvement	95–132
6. Role of Salicylic Acid in Biotic and Abiotic Stress Tolerance in Plants	133–164
7. Why Plants Need a Rich Diversity of Gibberellins?	165–193
8. Biosynthesis and Homeostatic Environmental Regulation of Gibberellic Acid During Progressive Development	194–241
9. Crop (Pulses) Responses to Plant Growth Regulators and Nutrients	242–326
<i>Selected Readings</i>	327–372
<i>Glossary</i>	373–394
