<i>Preface</i>	<i>v</i>	
1. Introduction to Microwaves	1–14	
1.1 Introduction	1	
1.2 Propagation of Electromagnetic Waves	1	
1.3 Properties of Radio Waves	1	
1.4 Generation of Radio Waves	4	
1.5 Modulation	4	
1.6 Nature of Modulated Wave	4	
1.7 Significance of Sidebands	5	
1.8 Transmission of Radio Signals	6	
1.9 Reception of Radio Signals	6	
1.10 Detection of Radio Signals	6	
1.11 Reproduction of Radio Signals	7	
1.12 Microwave Frequencies	7	
1.13 Characteristics of Microwaves	8	
1.14 Microwave Devices	8	
1.15 Microwave Systems	9	
1.16 Microwave Units	9	
1.17 Historical Background	9	
1.18 Microwave Applications	10	
2. Transmission Line Theory and Impedance Matching	15–55	
2.1 Introduction	15	
2.2 Transmission Line Equations with Sinusoidal Excitation	15	
2.3 Transmission Line Constants	16	
2.4 Impedance and Admittance Equations	19	
2.5 Reflection Coefficient	22	
2.6 Transmission Coefficient	24	
2.7 Standing Wave	26	
2.8 Standing Wave Ratio (SWR)	29	
2.9 Smith Chart	32	
2.10 Impedance Matching	36	
2.11 Condition for Impedance Matching	36	
2.12 Impedance Matching Methods	36	
3. Multiconductor Microwave Transmission Lines	56–79	
3.1 Introduction	56	
3.2 Classification of MW Transmission Lines	56	
3.3 Coaxial Cables	57	
3.4 Lossless or Ideal Coaxial Lines	58	
3.5 Coaxial Cable Connectors and Adaptors	60	
3.6 Dielectric Bead Supports	62	
3.7 Planar Transmission Lines	64	
3.8 Strip Lines	64	
3.9 Microstrip Lines	66	
3.10 Parallel Strip Lines	70	
3.11 Slot Lines	72	
3.12 Shielded Strip Lines	72	
3.13 Coplanar Strip Lines	72	
4. Single Line and Open-Boundary Structures	80–116	
4.1 Introduction	80	
4.2 Waveguides	80	
4.3 Rectangular Waveguide	81	
4.4 Circular Waveguides	93	
4.5 Power Handling Capabilities	104	
4.6 Some Special Configurations of Waveguides	105	
4.7 Open-boundary Structures or Surface Waveguides	109	
4.8 Dielectric Rod Waveguides	109	
4.9 Dielectric Sheet on Conducting Plane	110	
4.10 Dielectric-Coated Conducting Cylinder or Goubau Line	110	
4.11 Comparison between Coaxial Lines and Waveguides	111	
4.12 Comparison of Various Transmission Lines	111	
5. Microwave Network Theory	117–134	
5.1 Introduction	117	
5.2 Electrical Network Parameters	117	
5.3 Symmetrical Property of Reciprocal Network	119	
5.4 Scattering Matrix of a Multi-Port Network	119	
5.5 Losses in Microwave Circuits	123	
5.6 Properties of S-matrix	123	
5.7 S-matrix of a Two-Port Network with Mismatched Load	126	
5.8 Comparison between S, Z and Y Parameters	127	
5.9 Advantages of S-matrix over Z and Y Matrices	128	

5.10 Derivation of Relationship between S , Z , Y and $ABCD$ Parameters 128	8.6 Quality Factor of Cavities 188
6. Microwave Passive Components 135–154	8.7 Shunt Impedance of Cavity Resonators 192
6.1 Introduction 135	9. Microwave Filters 199–222
6.2 Waveguide Choke Flanges 135	9.1 Introduction 199
6.3 Short Circuit Plunger 136	9.2 Classification of Filters 199
6.4 Rectangular to Circular Waveguide Transition 137	9.3 Filter Parameters 201
6.5 Waveguide Corners, Bends and Twists 138	9.4 Insertion Loss Due to Mismatch 201
6.6 Coaxial Line to Waveguide Adaptors 138	9.5 Microwave Filter Elements 202
6.7 Coupling Loops 139	9.6 Microwave Filter Design Techniques 202
6.8 Coupling Apertures 139	9.7 Transformation of Prototype Filter 207
6.9 Attenuators 140	9.8 Design of MW Low-Pass Filter 209
6.10 Phase Shifters 141	9.9 Design of MW High-Pass Filter 210
6.11 Waveguide Tees 143	9.10 Design of MW Band-Pass Filter 211
6.12 Applications of Magic Tee 148	9.11 Microwave Band Stop Filter Design 213
7. Microwave Isolators, Circulators and Directional Couplers 155–179	10. Klystron Amplifier 223–246
7.1 Introduction 155	10.1 Introduction 223
7.2 Isolator or Uniline 155	10.2 Limitations of Conventional Vacuum Tubes 223
7.3 Circulators 158	10.3 Classification of Microwave Vacuum Tubes 225
7.4 Three-Port Circulator 160	10.4 Two Cavity Klystron Amplifier 225
7.5 Directional Couplers 160	10.5 Mechanism of Operation 226
7.6 Types of Directional Couplers 162	10.6 Analysis of Two Cavity Klystron Amplifier 227
7.7 Single-Hole or Bethe-Hole Coupler 162	10.7 Beam Loading 233
7.8 Center-Hole Coupler 162	10.8 Output Power 233
7.9 Offset-Hole Coupler 163	10.9 Typical Characteristics 234
7.10 Two-Hole Coupler 163	10.10 Mutual Conductance 235
7.11 Multi-Hole Coupler 164	10.11 Voltage Gain 235
7.12 S -matrix of a Directional Coupler 164	10.12 Applications of Two-Cavity Klystron Amplifier 235
7.13 Binomial Coupler 165	10.13 Modern Klystron Tubes 235
7.14 Tchebyshev Coupler 167	10.14 Multi Cavity Klystron 237
7.15 Coupled Transmission Line Coupler 168	10.15 Space-Charge Effects in Two Cavity Klystron 239
7.16 Multi-Section Coupler 168	11. Reflex Klystron Oscillator 247–256
7.17 Branch Line Coupler 169	11.1 Introduction 247
7.18 Hybrid Ring or Rat-Race Coupler 169	11.2 Reflex Klystron Tube 247
7.19 Schwinger Reversed-Phase Coupler 170	11.3 Velocity Modulation 248
7.20 Long Slot Coupler 171	11.4 Oscillation Modes 249
7.21 Lange Directional Coupler 171	11.5 Analysis of Reflex Klystron Oscillator 249
7.22 Capacitance Loop Coupler 171	11.6 Equivalent Circuit 251
7.23 Applications of Directional Couplers 171	11.7 Electronic Admittance 251
7.24 Power Dividers and Combiners 172	11.8 Power Output 252
8. Microwave Resonators 180–198	11.9 Efficiency 253
8.1 Introduction 180	11.10 Mode Curves 253
8.2 Resonator Parameters 180	11.11 Typical Characteristics 253
8.3 Resonator Types 181	11.12 Reflex Klystron Modulators 253
8.4 Coaxial Cavity Resonator 181	11.13 Applications 254
8.5 Waveguide Cavity Resonators 183	

12. Travelling Wave Tube Amplifier	257–271		
12.1 Introduction	257		
12.2 Traveling Wave Tube (TWT)	257		
12.3 Slow-Wave Structure Analysis	257		
12.4 Brillouin Diagram	258		
12.5 Amplification Process	260		
12.6 Suppression of Oscillations	267		
12.7 Bandwidth	267		
12.8 Distortion	267		
12.9 Typical Characteristics	267		
12.10 Applications	268		
12.11 Advantages	268		
12.12 Comparison between TWT and Klystron Amplifiers	268		
13. Magnetron Oscillator	272–293		
13.1 Introduction	272		
13.2 Types of Cross-Field Tubes	273		
13.3 Magnetron Oscillators	273		
13.4 Cylindrical Magnetron Oscillators	273		
13.5 Linear Magnetron	279		
13.6 Coaxial Magnetron	282		
13.7 Voltage-Tunable Magnetron	283		
13.8 Rieke Diagram	284		
13.9 Amplitron (BWCFA)	284		
13.10 Carcinotron (BWCFO)	287		
14. Microwave Crystal, Schottky and PIN Diodes	294–303		
14.1 Introduction	294		
14.2 Classification of Microwave Diodes	294		
14.3 Crystal Diode	294		
14.4 Schottky Diode	295		
14.5 Applications	296		
14.6 PIN Diode	297		
14.7 PIN Diode Applications	298		
15. Transferred Electron (Gunn) Devices	304–324		
15.1 Introduction	304		
15.2 Bulk Negative Resistance	304		
15.3 Gunn Effect and GaAs Diode	305		
15.4 Ridley-Watkins-Hilsum (RWH) Theory	306		
15.5 Equivalent Circuit	313		
15.6 Modes of Operation	313		
15.7 LSA Diodes	315		
15.8 INP Diodes	317		
15.9 CdTe Diodes	318		
15.10 Microwave Generation and Amplification	318		
16. Avalanche Transit Time Devices	325–340		
16.1 Introduction	325		
16.2 Avalanche Transit Time Devices (ATTD)	325		
16.3 Read Diode	326		
16.4 IMPATT Diodes	329		
16.5 TRAPATT Diodes	333		
16.6 BARITT Diodes	335		
16.7 Comparison between TED and ATTD	336		
17. Tunnel Diodes	341–348		
17.1 Introduction	341		
17.2 Tunnel Diode	341		
17.3 Tunnel Diode Amplifier	344		
17.4 Tunnel Diode Oscillator	344		
17.5 Comparison between Tunnel Diodes and pn Junction Diode	345		
17.6 Applications	346		
18. Varactor Diodes	349–354		
18.1 Introduction	349		
18.2 Principle of Operation	349		
18.3 Structure and Equivalent Circuit	350		
18.4 Varactor Diode Frequency Multiplier	351		
18.5 Varactor Diode Tuning Circuit	352		
18.6 Applications	352		
19. Parametric Amplifiers	355–364		
19.1 Introduction	355		
19.2 Principle of Parametric Amplifier	355		
19.3 Manley-Rowe Power Relations	355		
19.4 Power Output	357		
19.5 Power Gain	357		
19.6 Parametric Amplifiers	357		
19.7 Up-Converter	358		
19.8 Down-Converter	358		
19.9 Negative Resistance Parametric Amplifier	359		
19.10 Degenerate Parametric Amplifier	360		
19.11 Advantages of Up-Converters	360		
19.12 Advantages and Limitations of Parametric Amplifiers	361		
19.13 Applications	361		
20. Microwave Transistors	365–377		
20.1 Introduction	365		
20.2 High-Frequency Limitations	365		
20.3 Bipolar Junction Transistors	366		
20.4 CE Configuration	367		

20.5 CB Configuration	367		
20.6 Transistor Biasing	368		
20.7 Internal Tuning of Microwave Transistors	368		
20.8 Typical Characteristics	369		
20.9 Comparison between SI and GaAs Microwave Transistors	369		
20.10 Microwave Field Effect Transistors	369		
20.11 Cut-Off Frequency and Maximum Oscillation Frequency	370		
20.12 High Electron Mobility Transistor	371		
20.13 FET Biasing	371		
20.14 Microwave Transistor Amplifier Circuit	372		
20.15 Microwave Transistor Oscillator Circuit	372		
20.16 Applications of Microwave Transistors	372		
20.17 Transistor Noise Factor	373		
20.18 Equivalent Noise Temperature	374		
21. Microwave Communication Systems	378–390		
21.1 Introduction	378		
21.2 Basic Microwave Communication Systems	378		
21.3 Terminal Stations	379		
21.4 Microwave Frequency Scheme	380		
21.5 Microwave Repeaters	380		
21.6 Atmospheric Refraction	381		
21.7 Radio Horizon	382		
21.8 Contour Maps	383		
21.9 Fresnel Zone	383		
21.10 Ground Reflections	384		
21.11 Super-refraction and Subrefraction	384		
21.12 Fading	385		
21.13 Diversity Systems	386		
21.14 Microwave Link Design	386		
21.15 System Gain	386		
21.16 Advantages of Microwave Communication Systems	387		
22. Satellite Communication Systems	391–398		
22.1 Introduction	391		
22.2 Communication Satellites	391		
22.3 Satellite Communication Systems	392		
22.4 Ground Station	392		
22.5 Satellite Transponder	393		
22.6 Link Losses	394		
22.7 Link Budget Calculations	395		
23. Radar Systems	399–412		
23.1 Introduction	399		
23.2 Radar Classification	399		
23.3 Radar Frequencies	400		
23.4 Basic Radar System	400		
23.5 Radar Range Equations	400		
23.6 Duplexer	402		
23.7 Pulsed Radar	403		
23.8 FMCW Radar	405		
23.9 Doppler Effect	406		
23.10 FM Doppler Radar	406		
23.11 CW Doppler Radar	407		
24. Industrial Applications of Microwaves	413–420		
24.1 Introduction	413		
24.2 Microwave Heating	413		
24.3 Domestic Microwave Ovens	414		
24.4 Industrial Microwave Dryers	415		
24.5 Industrial Plasma Generators	416		
24.6 Measurement of Moisture Content	416		
24.7 Measurement of Thickness	417		
24.8 Microwave Applications in Medicine	417		
25. Monolithic Microwave Integrated Circuits	421–438		
25.1 Introduction	421		
25.2 Classification	421		
25.3 Scale of Integration	422		
25.4 Applications	422		
25.5 Materials for MMIC Fabrication	422		
25.6 Properties of Substrate Materials	423		
25.7 Selection of Substrate Materials	423		
25.8 Properties of Conductive Materials	423		
25.9 Properties of Dielectric Materials	424		
25.10 Properties of Resistive Materials	425		
25.11 Development of Microwave Integrated Circuits (MMICs)	425		
25.12 Monolithic Microwave Integrated Circuits	425		
25.13 MMIC Fabrication Methods	426		
25.14 Example of Fabrication	428		
25.15 Disadvantages of MMICs	428		
25.16 Fabrication of MOSFET	428		
25.17 Thick-Film Formation	431		
25.18 Hybrid Microwave Integrated Circuit (HMIC) Fabrication	434		
25.19 Quasimonolithic Microwave Integrated Circuits (QMMICs)	436		

26. Microwave Measurement Devices and Instruments 439–446

- 26.1 Introduction 439
- 26.2 Tunable Detector 439
- 26.3 Slotted Line Probe 440
- 26.4 VSWR Meter 441
- 26.5 Spectrum Analyzer 442
- 26.6 Network Analyzer 443
- 26.7 MW Reference Power Sensors 444
- 26.8 MW Power Sensors 444

27. Microwave Measurement Techniques 447–463

- 27.1 Introduction 447
- 27.2 Microwave Power Measurements 447
- 27.3 Insertion Loss and Attenuation Measurements 449
- 27.4 VSWR Measurements 449
- 27.5 Impedance Measurements 451
- 27.6 Measurement of Scattering Parameters 452
- 27.7 Measurement of Frequency 452
- 27.8 Measurement of Cavity Q 454
- 27.9 Measurement of Dielectric Constant 456
- 27.10 Measurement of Antenna Parameters 458
- 27.11 Measurement of Noise Factor 460

28. Microwave Radiation Hazards 464–471

- 28.1 Introduction 464
- 28.2 Features of Microwave Radiation 464
- 28.3 Microwave Radiation Levels 464
- 28.4 Biological Interactions 465
- 28.5 Interactive Mechanisms 467
- 28.6 Biological Effects 467
- 28.7 Hazard Levels and Protection 468

29. Microwave Antennas 472–489

- 29.1 Introduction 472
- 29.2 Antenna Characteristics 472

- 29.3 Antenna Efficiency 472
- 29.4 Antenna Gain 473
- 29.5 Radiation Pattern and Side Lobes 474
- 29.6 Beam Width 475
- 29.7 Polarization 475
- 29.8 Classification of Antennas 477
- 29.9 Half-Wave Dipole Antenna 477
- 29.10 Horn Antennas 479
- 29.11 Reflector Antenna 481
- 29.12 Lens Antennas 483
- 29.13 Slot Antennas 484
- 29.14 Microstrip Antennas 484
- 29.15 Semiconductor Dipole Antennas 486

Glossary 490–498**Appendices 499–506****Appendix I:** University Question Papers 499**Appendix II:** Classification of Microwave Solid State Devices 503**Appendix III:** Applications of MW Solid State Devices 503**Appendix IV:** Standard Multiples and Sub-multiples 504**Appendix V:** Greek Letters 504**Appendix VI:** Physical Constants 504**Appendix VII:** Properties of Free Space 504**Appendix VIII:** Pascal's Triangle 505**Appendix IX:** Characteristics of Single Stage Solid State MW Amplifiers 505**Appendix X:** Electromagnetic Frequency Spectrum 505**Appendix XI:** Visible Spectrum 506**Appendix XII:** Television Channels 506**Index 507–511**
