Contents

Prefe	ace	1
	Section I GENERAL CONSIDERATION AND BIOLOGICAL ASPECTS	
1.	Food Biochemistry: An Overview	3-16
	Introduction 3 Food Biochemistry 3 Importance of Food Biochemistry and Metabolic Processes 3 Biochemistry of Food Carbohydrates 5	
	Food Protein Biochemistry 7 Food Lipid Biochemistry 10 Gross Chemical Composition of Foods 12 Chemistry of Food Constituents 15	
2.	Water Chemistry and Biochemistry	17-25
	Introduction 17 Water Use in the Food Industry 18 Importance of Water in Food Industry 21	
3.	Enzymes Classification and Nomenclature	26-32
	Introduction 26 Biological Catalysts 27 Classification of Enzymes 29 Nomenclature of Enzymes 30	
4.	Browning Reactions	33-54
	Introduction 33 Maillard Reaction 35 Strecker Amino-Acid Synthesis 43 Heterocyclic Compounds 43 Role of Kinetic Modelling 47	
	Section II CEREALS, LEGUMES, STARCH AND THEIR DERIVATIVES	

5. Cereals

57-71

Introduction 57 Cereals 58

x Food Biochemistry

Technical Aspects of Cereals 61 Role of Cereals in Health and Disease 66 Future Developments of Cereals and Their Products 70

6. Legumes

Introduction 72 Processing of Legumes 73

7. Starch and their Derivatives

Introduction 83 Properties of Various Common Starches 85 Structure of Starch 85 Manufacture of Starches 88 Pre-gelatinised Starches 106 Uses of Starch in Food Industry 110

Section III POSTHARVEST FRUITS AND VEGETABLES

72-82

83-116

119-130

131-149

8. Postharvest Fruits

Introduction 119 Classification of Fruits 119 Factors Influencing Composition and Quality of Fruits 120 Fruit Maturity, Ripening and Quality Relationships 121 Biological Factors Involved in Postharvest Deterioration of Fruits 124 Environmental Factors Influencing Deterioration of Fruits 126 Harvesting Procedures 127 Postharvest Handling Procedures 127 Keys to Successful Handling of Fresh Fruits 129

9. Postharvest Vegetables

Introduction 131 Reducing Postharvest Losses 131 Vegetable Quality and Food Safety 133 Factors Affecting Vegetable Quality 136 Harvesting and Field Handling 140 Packaging of Vegetables 143 Cooling and Storage 146 Transport and Market Handling 147 Processing and Value Addition 148

10. Biochemistry and Nutritional Quality of Fruits and Vegetables 150-174

Introduction 150 Traditional Components 151 Antioxidants in Fruits and Vegetables 159 Fruits and Vegetables as Direct Sources of Minerals 164 General Considerations of Selected Minerals 165 Factors Influencing Mineral Content of Fruits and Vegetables 170 Effect of Minerals on Fruit and Vegetable Quality and Consumer Acceptance 172

Section IV ENZYMES THEIR SAFETY REGULATIONS AND PROTEIN CROSS-LINKING				
11.	Enzymes as Biocatalysts	177-187		
	Introduction 177 Principles of Enzyme Engineering 177 Steps in Enzyme Engineering 178 Engineering Enzymes for Biocatalysis 179 Current and Future Developments 187			
12.	Enzymes in Food Industries	188-212		
	Introduction 188 Added Enzymes in the Food Industries 190 Polyphenol Oxidase and Browning of Fruit and Vegetables 199 Polyphenol Oxidase in Food Additive Preparation 200 Use of Enzymes to Remove Oxygen from Foodstuffs 202 Food Enzymology in the Prevention of Food Toxicity 203 Food Antioxidants Including Added Enzymes and Proteins 206 Added Enzymes in the Food Industry: Future Prospects 211 Enzymes as Additives or Processing Aids in Food Biotechnology 211			
13.	Risk Assessment Guidance for Enzymes	213-226		
	Introduction 213 Risk Assessment 213 Dose-Response Assessment 218 Exposure Assessment 221 Risk Management 223			
14.	Safety Regulations for Food Enzymes	227-238		
	Introduction 227 Safety Concerns Associated with Enzymes 228 Regulatory Contexts and Requirements for Safety Evaluations 231 Industry Perspective 234 New Methods in Enzyme Production 236 Challenges for Food Enzyme Regulation and Safety Evaluation 236			
15.	Protein Cross-Linking	239-250		
	Introduction 239 Maillard Reaction 241 Cross-Linking of Proteins 244 Role of Cross-Linking Enzymes in Meat Systems 247			
16	Biochemistry of Milk	253_281		
10.	Introduction 253 Milk Composition 253	200-201		

Milk Composition Lipids 260 Milk Proteins 264 Lactose 276

17. Off-Flavour in Milk and Milk Products

Introduction 282 Environmental Aspects related to Off-flavours 284 Animal Feeding-Associated Off-Flavours 285 Proteolysis-Associated Off-Flavours 285 Aldehydes, Alcohols, Keto Acids 286 Milk Fat-Associated Off-Flavours 287 Micro-Organisms Associated Off-Flavours 287 Astringency 288 Sulphur Compounds 288 Miscellaneous Dairy Products 289 Troubleshooting Milk Flavour Problems 290 Sensory Evaluation of Milk Judging and Grading Milk 295 Detecting and Correcting Off-Flavours in Milk 296 Lipase Catalysed Modification of Milk Fat 296

18. Biochemistry of Cheese and Yogurt

Introduction 305 Milk as Food for Humans 306 Milk as Food for the Calf 308 Components Influencing Milk Quality 308 Causes of Milk Spoilage 308 Antibiotics 319 Mastitis in Dairy Cattle 324 Coagulation of Milk 326 Mechanism and Properties of Acid-Coagulated Milk Gels 329 General Functions of Cheese Cultures 331 Secondary Cultures 333 Bacteriocins from Lactic Acid Bacteria 334 Chymosin in Cheese Making 338 Importance of Calcium and Phosphate in Cheese Manufacture 338

Section VI BIOCHEMISTRY OF MEAT, POULTRY AND FISH

19. Biochemistry of Meat

Introduction 353 Fermented Meat 354 Raw Material Preparation 355 Fermented Sausages 360 Finished Product 370

20. Biochemistry of Poultry Meat

Introduction 375 Selection and Grading of Manufacturing-Meat from Poultry 376 Processed Products Made of Chicken Meat 378 282-304

305-350

353-374

375-381

21. Egg Components in Food Systems

Introduction 382 Calcium Carbonate Content of Eggshells 383 Structure of the Egg 385 Egg Composition 386 Egg Processing 386 Functional Properties 389 Functional Property Changes due to Processing 392 Microbiology 394 Sensory Evaluation 396 Factors Affecting the Foaming Properties of Egg White 396 Bioactive egg components and Their potential uses 404 Effect of Heat on Egg White Proteins 410 Continuous Pasteurisation of Egg White: Thermophysical and Flow Properties and Process Design 414

22. Biochemistry of Fish

Introduction 416 Biochemical Composition of Fish 417 Fish Reduction 422 Biochemical Aspects of Seafood 429 Nutritive Composition of the Major Groups of Seafood and Their Health Attributes 430 Biochemistry of Glycogen Degradation 431 Biochemistry of Protein Degradation 432 Biochemical Changes in Non-Protein Nitrogenous Compounds 432 Lipids in Seafoods 432 Biochemical Changes in Pigments During Handling, Storage and Processing 435 Biochemical Indices 436 Biochemical and Physico-Chemical Changes in Seafood During Freezing and Frozen Storage 436 Biochemistry of Dried Fermented, Pickled and Smoked Seafood 439 Biochemistry of Thermal-Processed Products 440 Utilisation of Fishery Waste 440

Section VII LIPID OXIDATION, OIL SEED PROCESSING AND FAT MODIFICATION

23. Lipid Oxidation and its Control

445-500

Introduction 445 Lipids 446 Action of Oxidation 447 Oxidation of Lipids in Food 448 Mechanism of Lipid Oxidation 448 Pro-Oxidants and Antioxidants 450 Oxidation of Sterols and Fat-Soluble Vitamins 451 Oxidation Impact on Sensory Properties of Fat-Containing Food 453 Lipid Peroxidation 454 Biological Implications of Lipid Peroxidation 457 Chemical Mechanisms for Lipid Peroxidation Process 458 Role of Transition Metal on Lipid Peroxidation Process 464

382-415

416-442

xiv Food Biochemistry

Toxic Effects of Secondary Products of Lipid Peroxidation 466 Lipid Peroxidation of Subcellular Fragments 467 Lipid Peroxidation and Human Pathologies 468 Lipid Peroxidation and Ageing 469 Analytical Determination of Lipid Peroxidation 469 Major Food Antioxidants 475 Antioxidant Formulations 481 Evaluation of Antioxidant Potency 482 Thermal Degradation of Phenolic Antioxidants 483 Antioxidants: Body's Guard Against Disease and Ageing 483 Health and Nutritional Implications of Lipid Oxidation 487 Economical Aspects of Using Antioxidants 488 Interaction of Lipid Oxidation Products with Food Components 489 Methods for the Assessment of Lipid Oxidation 490 Lipid Oxidation in Muscle Foods 491

24. Oil Seed Processing and Fat Modification

501-552

Introduction 501 Minor Components and Contaminants to be Eliminated 502 Receiving and Storing Crude Oils 504 Storage 504 Preparation of Seeds for Extraction of Oil 506 Mechanical Extraction 509 Solvent Extraction 510 Eliminating Phospholipids, Degumming and Lecithin Processing 513 Caustic Soda Neutralisation 517 Bleaching 524 Filters: Process and Technology 528 Hydrogenation 534 Interesterification 537 Fractionation 538 Deodourisation and Physical Refining 540 Shortening and Margarine Manufacturing 545 Acidulation 548 Ultrafiltration–Current Status and Related Problems for Edible Oils Refining 549

Section VIII BIOCHEMISTRY OF BREWING, NON-ALCOHOLIC BEVERAGES AND VINEGAR

25. Yeast Fermentation and Making of Beer, Wine and Whiskey

555-571

Introduction 555 Beer Brewing Process 555 Wine 562 Whiskey 563

26. Non-Alcoholic Beverages

Introduction 572 Carbonated Non-Alcoholic Beverages 572 Stimulating Beverages 572 572-579

Cocoa 575 Fermentation of Cocoa 576	
27. Biochemical Aspects of Vinegar Production	580-588
Introduction 580 Vinegar Production 581 Micro-Organisms Involved in the Vinegar Production 581	
References	589-590
Index	591–601

Preface xv
