Preface

7

PART-A **CHEMICAL METHODS OF ANALYSES**

1. NON-AQUEOUS TITRATIONS

3-29

- 1. Introduction 3
- 2. Theory 4
 - 2.1. Classification 5
 - 2.1.1. Aprotic Solvents 5
 - 2.1.2. Protophilic Solvents 5
 - 2.1.3. Protogenic Solvents 6
 - 2.1.4. Amphiprotic Solvents 6
 - 2.1.5. Levelling Solvents 7
 - 2.2. Differential Titrations 7
 - 2.2.1. Status of Pyridine 7
 - 2.2.2. Status of DMF, Acetone and Acetonitrile 8
 - 2.2.3. Status of Glacial Acetic Acid and Dioxane 8
 - 2.3. Measurement of Acid-Base Strength 8
 - 2.4. Reference Acid 10
- 3. Methodology 12
 - 3.1. Solvents for Non-Aqueous Titrations 12
 - 3.1.1. Glacial Acetic Acid 12
 - 3.1.2. Acetonitrile 12
 - 3.1.3. Alcohols 12
 - Mode of Action 13
 - 3.1.4. Dioxan 13
 - 3.1.5. Phenol-Chloroform-Acetonitrile 13
 - 3.1.6. Dimethylformamide (DMF) 13
- 4. Indicators Used in Non-Aqueous titrations 13
 - Important Points 14

5. Preparation of 0.1 M Perchloric acid [HClO_4] 15
6. Standardization of 0.1 M Perchloric Acid 15
 - Primary Standard 16
7. Effect of Temperature on Non-Aqueous Assays 16
8. Drug Assay : Non-Aqueous Titrations 17
 - 8.1. Assay of Methyl Dopa 17
 - 8.2. Methadone Hydrochloride [Syn.: Amidone Hydrochloride] 18
 - 8.3. Cognate Assays 19
 - 8.4. Potentiometric Titrations 19
 - 8.5. Alkalimetry in Non-Aqueous Titrations 20
 - 8.5.1. Preparation of 0.1 M. Sodium Methoxide 20
 - 8.5.1.1. Standardization of 0.1 M Sodium Methoxide 21
 - Precautions 22
 - Reactions 22
 - 8.5.1.2. Assay of Ethosuximide 23
 - 8.5.1.3. Cognate Assays 23
 - 8.5.2. Preparation of 0.1 M. Tetrabutylammonium Hydroxide in Toluene-Methanol 24
 - 8.5.2.1. Standardization of 0.1 M. Tetrabutylammonium Hydroxide 24
 - 8.5.2.2. Assay of Chlorthalidone 25
 - 8.5.2.3. Cognate Assays 25
 - 8.6. Potentiometric Titrations of Identical Analyte Samples 26

2. COMPLEXOMETRIC ANALYSIS

31-57

1. Introduction 31
 - Salient Features 32
2. Theory 32
 - 2.1. Mechanism 32
 - 2.2. Classification of Ligands 33
 - 2.3. Criteria of Complexation and Detection 33
 - 2.3.1. Effect of pH on Complexation 33
 - 2.3.2. Stability Profile of Complexes 34
 - 2.3.3. Coloured EDTA-Metal Ion Complexes 35
 - 2.3.4. Metal Ion Indicators [Syn] Metallochromae Indicators; Metal Indicators; pM Indicators 36
 - Characteristic Features 36
 - 2.3.5. Titration Curves 39
3. Edta-Titration Variants 40
 - 3.1. Direct Titrations 40
 - 3.2. Back Titration 41
 - 3.3. Replacement (or Substitution) Titration 41
 - 3.3.1. Calcium: Replacement (or Substitution Titration) 42
 - 3.4. Miscellaneous Methods 44
 - 3.4.1. Titration with Ag and Au 44
 - 3.4.2. Titration with Phosphate [PO_4^{3-}] 45

- 3.4.3. Titration with Sulphate [SO_4^{2-}] 45
- 3.4.4. Titration with Fluoride [F^-] 45
- 4. Determination of Mixtures By Complexometric Titrations 45
 - 4.1. Appropriate Control of pH of Solution 46
 - 4.2. Application of Masking Agents 46
 - Salient Features 47
 - 4.3. Selective Demasking 47
 - 4.4. Kinetic Masking 48
- 5. Important Practical Precautionary Measures for Assay by Complexometric Titrations [or EDTA-TITRATIONS] 51
 - 5.1. Adjustment of pH 51
 - 5.2. Concentration of M^{2+} ion (Metal Ion) to be Assayed 51
 - 5.3. Quantum of Indicator 52
 - 5.4. Accomplishing the Equivalence Point (or End Point) 52
 - 5.5. Detection of Critical Colour Change 52
- 6. Assay Methods 53
 - 6.1. Direct Titration Methods 53
 - 6.1.1. Preparation of 0.05 M Disodium Edetate (or Disodium Ethylenediamine Tetraacetate) Solution 53
 - 6.1.2. Standardization of 0.05 M Disodium Edetate Solution 54
 - 6.1.3. Assay of Magnesium Sulphate [$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$] 54
 - 6.1.4. Cognate Assays 54
 - 6.2. Masking and Demasking Agents 55
 - 6.3. Residual Titration Methods 56
 - 6.3.1. Aluminium Sulphate 56
 - 6.3.2. Magnesium Stearate 57

3. MISCELLANEOUS METHODS OF ANALYSIS

59-90

- 1. Introduction 59
- 2. Principle 60
- 3. Assay of Drug Substances 60
 - 3.1. Sodium Nitrite Solution [0.1 M] 60
 - 3.2. Standardization of Sodium Nitrite Solution (0.1 M) with Sulphanilamide 60
 - 3.3. Typical Examples of Drug Assays 62
 - 3.3.1. Isocarboxazid 62
 - 3.3.2. Sulphaphenazole 63
 - 3.3.3. Cognate Assays 64

II. KJELDAHL METHOD [NITROGEN ESTIMATION]

66-69

- 1. introduction 66
- 2. Principle 66
- 3. Assay of Drugs 68
 - 3.1. Urethan [Syn: Urethane; Ethyl Urethan; Ethyl Carbomate;] 68
 - 3.2. Cognate Assays 69

Recommended Readings 69

Probable Questions 69

III. KARL FISCHER TITRATION: DETERMINATION OF WATER

70-79

1. introduction 70
2. Principle 70
 - 2.1. Stability of the KF-Reagent 71
 - 2.2. Detection of Equivalence Point 71
 - 2.3. Limitation of KF-titrations 72
 - 2.4. Interference of 'Compounds' in KF-titrations 72
3. Instruments 73
 - 3.1. Karl Fischer Electrometric Titration Technique 74
 - 3.2. Dedicated Karl Fischer Titrations 75
 - 3.3. Coulometric Karl Fischer Titrators 75
 - 3.4. Robotics 76
4. Assay of Drugs 76
 - 4.1. Standardization of Karl Fischer Reagent 76
 - 4.2. Assay of Prednisolone Sodium Phosphate 77
 - 4.3. Cognate Assays 78

Recommended Readings 79

Probable Questions 79

IV. OXYGEN FLASK COMBUSTION

80-88

1. introduction 80
2. Principle 80
3. Instrumentation 81
4. Assay of Halides and Sulphur 82
 - 4.1. For Halides 82
 - 4.1.1. For Solid Substances 83
 - 4.1.2. For Liquid Substances 83
 - 4.1.3. For Ointments/Pastes 83
 - 4.2. For Bromine [Br₂] 83
 - 4.3. For Chlorine [Cl₂] 83
 - 4.4. For Fluoride [F₂] 84
 - 4.5. For Iodine (I₂) 84
 - 4.6. For Sulphur 84
 - 4.6.1. First Method 84
 - 4.6.2. Second Method 85
 - 4.6.3. Calculations 85
5. Assay of Drugs 86
 - 5.1. Assay of Diazepam [For Chloride Content] 86
 - 5.2. Cognate Assays 87

Recommended Readings 87

Probable Questions 87

V. GASOMETRIC ASSAY METHODS**89-90**

1. Introduction 89
2. Principle 89
3. Determination of Gaseous Substances 89
 - 3.1. Carbon Dioxide [CO₂] 90
 - 3.2. Cyclopropane [C₃H₆] 90
 - 3.3. Oxygen [O₂] 90

Recommended Readings 90

Probable Questions 90

PART-B**Separation Techniques [or Extraction Procedures]****4. SEPARATION OF DRUGS FROM EXCIPIENTS****93-123**

1. Introduction 93
 - 1.1. Commonly Employed Excipients 94
2. Interferant Variants In Secondary Pharmaceutical Products 94
 - 2.1. Capsules and Tablets 94
 - 2.2. Solutions and Suspensions 96

Salient Features 96
 - 2.3. Ointments and Creams 96
3. Solvent Extraction Techniques 97
 - 3.1. Extraction of Organic Basic and Acidic Compounds Using their Ionized and Un-ionized States 98
 - 3.2. Partitioning Between Organic Solvents 100
 - 3.3. Ion-Pair Extraction 101
 - 3.4. Derivatization Before Extraction 103
 - 3.5. Supercritical Fluid Extraction [SFE] [or Supercritical Fluid Chromatography [SFC] 103
 - 3.5.1. Important Points 103
 - 3.5.2. Merits of SFC 104
 - 3.5.3. Instrumentation 105
 - 3.5.4. Assay of Vitamin A, Vitamin E Plus their Respective Esters (Acetate + Palmitate) in Tablets 106
 - 3.5.5. Assay of Prostaglandin (PGE) 106
 - 3.6. Solid-Phase Extraction (SPE) 106
 - 3.6.1. Preamble 106
 - 3.6.2. Principle 107
 - 3.6.3. Advantages of SPE *vis-a-vis* Liquid/Liquid Extraction 107
 - 3.6.3.2. Liquid-Liquid Extraction 108
 - 3.6.3.3. Serious Limitations 108
 - 3.6.4. Instrumentation 108
 - 3.6.4.1. Solid-Phase Extraction (SPE) Cartridge and Syringe 109
 - 3.6.4.2. SPE-Pipette Tips 113

- 3.6.4.3. SPE-Disks *114*
- 3.6.4.4. State-of-the Art Methodology for SPE *114*
- 3.6.4.5. 96-Well SPE-Plates [or Microtiter Plates] *114*
- 3.6.4.6. Sorbent Variants for SPE *115*
 - 3.6.4.6.1. Polymeric Phases *115*
 - 3.6.4.6.2. Dual Phases *116*
 - 3.6.4.6.3. Lipophilic silica Gels *116*
 - 3.6.4.6.4. Polar Surface-Modified Silica Gels *117*
 - 3.6.4.6.5. Straight-Phase Adsorbants *118*
 - 3.6.4.6.6. Cation Exchanges Based on Surface-Modified Silica Gels *119*
 - 3.6.4.6.7. Anion Exchangers Based on Surface-Modified Silica Gels *120*
- 3.6.4.7. Governing Factors in SPE with Silica Gels *121*
- 3.7. Solid-Phase Microextraction [SMPE] Device *122*

5. SEPARATION OF BOUND AND FREE FRACTIONS IN RADIOIMMUNOASSAYS (RIAs)

125-141

- 1. Introduction *125*
- 2. Principles of Radioimmunoassay [RIA] *125*
 - 2.1. Antigen-Antibody Complexd [AgAb] *127*
 - 2.2. Avidity (or Affinity) *128*
 - Important Points *128*
 - 2.3. Calibration Curve *129*
 - 2.4. Specificity of Radioimmunoassays [RIAs] *130*
- 3. Instrumentation *132*
 - 3.2. Radioactive Counters *132*
 - 3.2.1. Gamma Counters *132*
 - 3.3.2. Scintillation Counters *132*
 - Important Points *132*
 - 3.3. Methodology *132*
 - 3.4. Immunoassay Variants *134*
 - 3.4.2. Enzyme Immunoassay *135*
- 4. Radioimmunoassay in Assay of Drugs *138*
 - 4.1. RIA of Flurazepam in Human Plasma *138*

6. SOLVENT EXTRACTION

143-157

- 1. Introduction *143*
- 2. Classification of Extraction Processes *146*
 - 2.1. Liquid-Liquid Extraction Method *146*
 - 2.1.1. Distribution [or Partition] Coefficient *147*
 - 2.1.1.1. Single Extraction *148*
 - 2.1.1.2. Multiple Extraction *149*

- 2.1.2. Effective Important Measures 151
 - 2.1.2.1. Choice of Solvents 151
 - 2.1.2.2. Control of Ionic Strength 152
 - 2.1.2.3. Control of pH 152
 - 2.1.2.4. Selectively of pH 153
 - 2.1.2.5. Control of Ion Hydrophobicity 153
- 2.2. Solid Extraction Methods 154
- 2.3. Solid-Phase Extractions 155

PART-C

Chromatography

7. COLUMN CHROMATOGRAPHY (CC)

161-181

1. Introduction 161
 - 1.1. The Chromatographic Phenomenon 161
 - 1.2. Development in Methodologies 162
 - 1.3. Separation Method Variants 162
 - 1.3.1. Elution Analysis 162
 - 1.3.2. Frontal Analysis 163
 - 1.3.3. Displacement Analysis 164
2. Principles of Chromatographic Separations 165
 - 2.1. Distribution Equilibrium 166
 - 2.2. Efficiency Criteria in Column Chromatography 167
3. Systematic Progress In Separation of Analytes 'X' And 'Y' by Column Chromatography. Practical Considerations in Column Chromatography 170
 - 4.1. Chromatographic Columns 171
 - 4.2. Preparation of Adsorbents 171
 - 4.3. Preparation of Adsorbents 173
 - 4.4. Developers 174
 - 4.5. Solvents 174
 - 4.5.1. Importance of Solvent Characteristics 174
 - 4.6. Packing of Columns 175
 - 4.6.1 Wet Packing 176
 - 4.6.2 Dry Packing 176
 - 4.7. Introduction of 'Sample Mixture' 176
 - 4.8. Elution Procedures 177
 - 4.8.1. Isocratic Elution 177
 - 4.8.2. Fractional (Stepwise) Elution 178
 - 4.8.3. Gradient Elution 178
 - 4.9. Detectors 178
5. Factors Affecting Efficiency of a Column 178
 - 5.1. Dimensions of Column 178
 - 5.2. Particle Size 179

- 5.3. Pore Diameter 179
- 5.4. Ambient Temperature 179
- 5.5. Nature of Solvents [Eluents] 179
- 5.6. Packing of Column 179
- 6. Applications of Column Chromatography in Pharmaceutical Analysis 179

8. THIN LAYER CHROMATOGRAPHY (TLC)

183-197

- 1. Introduction 183
- 2. Principle 184
- 3. TLC-Plates: Preparation Modalities 185
 - 3.1. Pouring of Layers 185
 - 3.2. Dipping 186
 - 3.3. Spraying 186
 - 3.4. Spreading 186
 - 3.5. Pre-coated TLC-Plates [or 'Ready-to-Use TLC-Plates'] 188
 - 3.5.1. Merits 188
- 4. Adsorbent Variants 188
 - 4.1. Inorganic Adsorbents 189
 - 4.2. Organic Adsorbents 190
- 5. Purification of Silica Gel-G Layers 191
- 6. Solvent System Profile In TLC 191
- 7. Spotting Components on TLC-Plates 193
- 8. Development of TLC Layers 194
 - 8.1. Equilibration of Chromatographic Chamber 195
 - 8.2. Protection Against Oxidation 195
 - 8.3. Visualization of Spots 195
- 9. Detection of Components 195
- 10. Applications of TLC in Pharmaceutical Analysis 196
 - 10.1. Aminophylline: Presence of Related Substances 196

9. PAPER CHROMATOGRAPHY (PC)

199-211

- 1. Introduction 199
- 2. Principle 199
- 3. R_f Values and Observed Variations 200
- 4. Paper Chromatography (PC) Variants 202
 - 4.1. Paper Partition Chromatography 202
 - 4.2. Paper Adsorption Chromatography 202
- 5. Operational Methodology 202
 - 5.1. Choice of Filter Paper 203
 - 5.2. Modified Filter Papers 203
 - 5.3. Treatment of Paper 204
 - 5.4. Sample Preparation 204
 - 5.5. Spotting of the Sample 204
 - 5.6. Mobile Phase 205

- 5.7. Chromatank [Chamber] 205
- 5.8. Chromatogram *vis-a-vis* Development Modes 206
- 5.9. Drying of Chromatogram 207
- 5.10. Location of Spots 207
 - 5.10.1. Physical Techniques 207
 - 5.10.2. Chemical Techniques 207
- 6. Quantitative Analyses 208
 - 6.1. Direct Measurement Methods 208
 - 6.1.1. Visual Comparison of Separated Spots 209
 - 6.1.2. Measurement of Spot Area 209
 - 6.1.3. Radiotracer Analytical Method 209
 - 6.2. Elution Methodological 209

10. GAS LIQUID CHROMATOGRAPHY (GLC)

213-241

- 1. Introduction 213
- 1.1. Advantages of Gas Liquid Chromatography (GLC) 213
- 2. Theory 214
 - 2.1. Stationary Phases 214
 - 2.1.1. Selection of stationary phases 214
 - 2.1.2. Separation phenomenon in GLC 217
 - 2.1.3. Resolution of chromatographic peaks 218
 - 2.1.3.1. Column efficiency 218
 - 2.1.3.2. Solvent efficiency 219
- 3. Instrumentation 222
 - 3.1. Carrier gas 222
 - 3.2. Sample Injection Device 223
 - 3.3. Column Technology 225
 - 3.3.1. The column 225
 - 3.3.2. Supporting medium 225
 - 3.3.3. The liquid phase 226
 - 3.3.4. Packing of chromatographic columns 227
 - 3.3.4.1. Packed columns 227
 - 3.3.4.2. Open tubular columns 227
 - 3.3.4.3. Support coated open tubular columns 228
 - 3.3.5. Equilibration of the column 229
 - 3.3.6. Control of GC-Column temperature 229
- 4. Detectors 229
 - 4.1. Thermal Conductivity Detector (TCD) 230
 - 4.2. Flame Ionization Detector (FID) 231
 - 4.3. Electron Capture Detector (ECD) 232
 - 4.4. β -Ray Ionization Detector 233
 - 4.5. Argon Detector 234
 - 4.6. Gas Density Cell 234

- 4.7. Cross Section Detector 234
- 4.8. Thermistors 234
- 5. Recorder 234
- 6. Integrator 234
- 7. Pharmaceutical Applications of Gas Chromatography 235
 - 7.1. Qualitative Analysis 235
 - 7.1.1. Analysis of aldehyde mixtures 235
 - 7.1.2. Supplement identification unknown compound 235
 - 7.1.3. Conferment in identifying a suspected compound 235
 - 7.1.4. Miscellaneous approaches 236
 - 7.2. Quantitative Analysis 236
 - 7.2.1. Assay of Glutethimide 236
 - 7.2.2. Assay of Lincomycin Hydrochloride 238
 - 7.3. Estimation of Specific Organic Compounds as Impurities Present in Official Pharmaceutical Substances 239
 - 7.3.1. Assay of N, N-Dimethylaniline in Cephalexin 239

11. HIGH PERFORMANCE LIQUID CHROMATOGRAPHY

243-269

- 1. Introduction 243
- 2. Principles 246
 - 2.1. Stationary Phase Characteristics 246
 - 2.2. Bonded Phase Supports 246
 - 2.3. Retention Vs Polarity 246
 - 2.4. Retention Vs Characteristics of Mobile Phase 247
 - 2.5. Structural Characteristics *vis-a-vis*
Elution Rate of Analytes from HPLC Columns 248
 - 2.5.1. Neutral Analytes: Elution profile 248
 - 2.5.2. Ionizable compounds: Variation in pH of mobile phase 251
- 3. Instrumentation 251
 - 3.1. Mobile Phase Reservoirs and Solvent Treatment Systems 252
 - 3.2. Pumping Devices 253
 - 3.3. Flow Control System 255
 - 3.4. Sample Port (or Sample Injection System) 255
 - 3.5. Columns 256
 - 3.5.1. Guard column 257
 - 3.6. Column Packing Materials 258
 - 3.6.1. Pellicular support 258
 - 3.6.2. Porous support 259
 - 3.7. Detectors for HPLC System 259
 - 3.7.1. Detector variants HPLC system 259
 - 3.7.1.1. UV-Visible absorption detectors 261
 - 3.7.1.2. Differential refractive index (RI) detectors 262
 - 3.7.1.3. Fluorescence detectors 263

- 3.7.1.4. Infrared (IR) detectors 263
- 3.7.1.5. Electrochemical amperometric detectors 263
- 3.7.1.6. Electrochemical conductivity detectors 264
- 3.7.1.7. Mass spectrometers (MSs) as detectors in HPLC system 264
- 3.7.1.8. Evaporate light scattering detectors 265
- 3.7.1.9. Diode array detectors (DAD) 265
- 4. Applications of HPLC in the Assay of Drugs 266
 - 4.1. Assay of Aspirin and Caffeine in Tablets by HPLC 266
 - 4.2. Isolation and Assay of Naturally Active Pharmaceutical Drug Substances 266
 - 4.3. Assay of Dichlophenamide 267
 - 4.4. Assay of Methyl Testosterone in Tablets by HPLC Analysis 267
 - 4.5. Stability Studies of Drug Formulations 268
 - 4.6. Bioassays *vis-a-vis* Complementmentation 268

12. ION-EXCHANGE CHROMATOGRAPHY [IEC]

271-285

- 1. Introduction 271
- 2. Ion-Exchange Resin Variants 272
 - 2.1. Cation-Exchange Resins 272
 - 2.2. Anion-Exchange Resins 273
 - 2.3. Importance of Crosslinkage 274
 - 2.4. Synthesis of Ion-Exchange Resins 274
 - 2.5. Mechanism of Ion-Exchange 277
 - 2.5.1. Double Layer Theory 277
- 3. Ion-Exchange Chromatography: Methodologies 278
 - 3.1. Batch Method 279
 - 3.2. Columnar Technique 279
- 4. Applications of Ion-Exchange Chromatography in Assay of Drugs 281
 - 4.1. Catecholamines in Urine by Electrochemical Detection 281
 - 4.2. Separation of Metals 282
 - 4.3. Critical Separation of Amino Acids 282
 - 4.4. Separation of Carbohydrates 284
 - 4.5. Purification and Recovery of Pharmaceuticals 284

13. GEL CHROMATOGRAPHY [CAPILLARY ELECTROPHORESIS OR ELECTROCHROMATOGRAPHY]

287-297

- 1. Introduction 287
 - 1.1. Zone Electrophoresis 287
 - 1.2. Highlights of CE 287
- 2. Principles of Electrochromatography 288
 - 2.1. Mobility of Ion Vs its pKa value 289
 - 2.2. Electro-Osmotic Flow (EDF) 290

3. Migration in Capillary Electrophoresis (CE) Vs HPLC 292
4. Electrochromatography Instrumentation 292
 - 4.1. Capillary Electrochromatography (CEC) 293
5. Applications of Capillary Electrophoresis (CE) in Pharmaceutical Analysis 294
 - 5.1. Assay of NSAIDs by CE and Separation of Anions on the Basis of Ionic Radius 294
 - 5.2. Assay of Atenolol 296

14. HIGH PERFORMANCE THIN-LAYER CHROMATOGRAPHY (HPTLC)

299-314

1. Introduction 299
 - 1.1. Advantages of HPTLC 299
 - 1.2. Important Aspects of HPTLC 300
2. Principle 301
3. Instrumentation 301
4. Important Features of HPTLC 302
 - 4.1. Schematic Procedure 302
 - 4.2. TLC Plate Variants in HPTLC and their Applications 303
 - 4.2.1. Hand-Made Plates: 303
 - 4.2.2. Pre-coated 'Readymade' TLC Plates 303
 - 4.2.3. Commonly Available Pre-coated TLC Plates and their Applications 303
 - 4.2.4. Chemically Modified Silica Gel 304
 - 4.2.5. HPTLC Plate Types 305
 - 4.2.5.1. Hybrid Plates [RP18W - F_{254s}]: 305
 - 4.2.5.2. Pre-Screen TLC Plates 306
 - 4.2.5.3. HPTLC Plates with Pre-Absorbent Layer [or Concentration Zone] 306
 - 4.2.5.4. Dual-Phase TLC-Plates 306
 - 4.2.5.5. Preparatory HPTLC Plates 306
 - 4.2.5.6. Pre-Washing of Pre-Coated Plates 307
 - 4.2.5.7. Activation of Pre-Coated Plates 307
 - 4.2.5.8. Preparation of 'Analyte Samples' for HPTLC Analysis 307
 - 4.2.5.9. Application 'Analyte Sample' on the HPTLC-Plates 308
 - 4.2.5.10. Distribution Profile of the Particle Size of HPTLC-Plates 308
5. Marketed Pre-coated hptlc-Plates Having: (a) Sorbent layer variants, and (b) Chemically modified layers 309
6. Analytical Parameters for Validating A HPTLC Method 310
7. Applications of HPTLC In Assay of Drugs 311
 - 7.1. Assay of Salicylic Acid Derivatives 311
 - 7.2. Assay of Ketorolac Tablets (10 mg) by HPTLC Method 312

PART-D

Electroanalytical Methods [or Electrometric Methods]

15. POTENTIOMETRIC TITRATIONS [or POTENTIOMETRY] 317-333

1. Introduction 317
 - 1.1. Electrochemical Cells 318
 - 1.1.1. Electrolytic cell 318
 - 1.1.2. Galvanic cell 319
 - 1.2. Nernst Equation 320
 - 1.3. Standard Electrode Potentials 321
2. Classification of Electroanalytical Techniques 322
 - 2.1. Potentiometry 322
 - 2.2. Voltammetry and Polarography 322
 - 2.3. Coulometry 322
 - 2.4. Conductometry 323
 - 2.5. Amperometry 323
 - 2.6. Miscellaneous Techniques 323
3. Quantitative Determinations by Potentiometry 323
4. Electrode Variants in Potentiometry 325
 - 4.1. Hydrogen Electrode 325
 - 4.2. Glass Electorde 326
 - 4.3. Reference Electrode 326
 - 4.4. Quinhydrone Electrode 327
 - 4.5. Metallic Electrode 328
 - 4.6. Liquid Membrane Electrodes 328
5. Further Extension of Potentiometry in Pharmaceutical Analysis 329
 - 5.1. Neutralization Reactions 329
 - 5.2. Precipitation Titrations 330
 - 5.3. Complexometric Titrations 330
 - 5.4. Redox Titrations 330
 - 5.5. Non-Aqueous Titrations 330
6. Applications of Potentiometric Titrations in Assay of Drugs 331
 - 6.1. Assay of Carbidopa 331
 - 6.2. Assay of Clonidive Hydrochloride 331
 - 6.3. Cognate Assays 332

16. CONDUCTOMETRIC TITRATIONS [or CONDUCTOMETRY] 335-349

1. Introduction 335
2. Principles of Analysis 337
3. Conductometric Titration Variants 338
 - 3.1. Strong Acid Vs Strong Base 339
 - 3.2. Strong Acid Vs Weak Base 339

- 3.3. Weak Acid Vs Strong Base 340
- 3.4. Weak Acid Vs Weak Base 340
- 3.5. Very Weak Acid Vs Strong Base 341
- 3.6. Combination of HCL (Strong Acid) Plus 342
- 3.7. Displacement Titrations 342
- 4. Instrumentation 343
 - 4.1. Types of Conductivity Cells 344
 - 4.1.1. Low conductance measurement cells 344
 - 4.1.2. Conductivity Cell for Precipitating Type of Reaction 344
 - 4.1.3. Dip Type Cell (Electrode Type Cell) 344
 - 4.2. Conductimetric Titrations Apparatus 345
 - 4.3. Measurement of Conductance 345
- 5. Applications of Conductometry in Analysis 347
 - 5.1. Solubility Profile of Sparingly Soluble Material 347
 - 5.2. Basicity of Organic Acids (B) 348
 - 5.3. Estimation of Concentration 348
 - 5.4. Extent of Dissociation of Weaker Electrolyte (μ) 348

17. AMPEROMETRIC TITRATIONS [OF AMPERSOMETRY]**351-359**

- 1. Introduction 351
 - 1.1. Salient Features of Amperometric Methods 352
- 2. Principle 352
 - 2.1. Titration Curves 353
- 3. Advantages of Amperometric Titrations 354
- 4. Instrumentation 354
 - 4.1. Amperometric Titrations with the Dropping Mercury Electrode 355
 - 4.2. Amperometric Titrations with a Rotating Pt-Micro Electrode 356
 - 4.3. Amperometric Titrations with Twin-Polarized Micro-Electrodes [Dead Stop End-Point Method or Biamperometric Titrations] 357
- 5. Applications of Amperometric Titrations in Pharmaceutical Preparations 358
 - 5.1. Procainamide Hydrochloride 358
 - 5.2. Assay of Nickel with Dimethylglyoxime 358
 - 5.3. Assay of Lead with $K_2Cr_2O_7$ Solution 358

18. POLAROGRAPHIC METHOD [OF POLAROGRAPHY]**361-375**

- 1. Introduction 361
 - 1.1. Diffusion Limiting Current 362
- 2. Principles of Polarography 364
 - 2.1. The Ilkovic Equation 365
 - 2.2. Polarographic Waves 366
 - 2.3. Concept of Half-Wave Potential 367
 - 2.4. Precise Measurement of Wave Heights 368
 - 2.5. Polarographic Maxima 369

3. Instrumentation 370
4. Applications of Polarography in Pharmaceutical Analysis 372
 - 4.1. Assay of Nitrofurantion, Metronidazole, and Tinidazole 372
 - 4.2. Assay of Nitrazepam 372
 - 4.3. Assay of Atropine 373
 - 4.4. A Host of Drug Substances that essentially contain 373
5. Recent Advanced Methodologies in Polarography 373
 - 5.1. Oscillographic Polarography 373
 - 5.2. Chronopotentiometry 374
 - 5.3. AC-Polarography 374

19. COULOMETRIC TITRATIONS [or COULOMETRY]

377-384

1. Introduction 377
2. Principle 377
3. Chemical Coulometer Apparatus 378
4. The Coulometric Cell 379
5. Constant Current *vis-a-vis* Constant Potential Coclometry 380
6. Coulometric Titrations 380
 - 6.1. Applications of Coulometric Titrations 381
 - 6.2. Coulometric Titration of HCl (Strong Mineral Acid) 383

PART-E Optical Methods

20. NEPHELOMETRY AND TURBIDIMETRY

387-397

1. Introduction 387
 - 1.1. Tyndall Scattering 387
 - 1.2. Rayleigh Scattering 388
 - 1.3. Raman Scattering 389
2. Principle 390
3. Instrumentation 391
 - 3.1. Photoelectric Colorimeter 391
 - 3.2. Comparator 391
 - 3.3. Immersion Colorimeter 392
 - 3.4. Nephelometer 394
4. Turbidimetric Titrations 395
5. Applications of Nephelometry and Turbidimetry 396

21. COLORIMETRIC ANALYSIS [or COLORIMETRY]

399-409

1. Introduction 399
2. Principle 400

- 2.1. Filter Colorimeter 400
- 2.2. Spectro colorimeter (or Spectrophotometer) 400
3. Fundamental Requirements and Parameters 401
4. Analyte Variants Analysable by Colorimetry 405
5. Modalities of Colour Measurement 406
 - 5.1. Visual Colorimetry 406
 - 5.2. Instrumental Procedures 406
6. Spreadsheet Calculation *vis-a-vis* Plot of Absorbance and Transmittance 406
7. Pharmaceutical Applications of Colorimetric Assays 407
 - 7.1. Assay of Sulphadiazine 407
 - 7.2. Assay of Biochemical 408
 - 7.3. Assay of Cholesterol 408

22. FLOWROMETRIC ANALYSIS [OR FLUORESCENCE SPECTROPHOTOMETRY] 411-420

1. Introduction 411
2. Principle 411
 - 2.1. Factors Governing Fluorescence 413
 - 2.1.1. Concentration of Analyte 413
 - 2.1.2. Photodecomposition 414
 - 2.1.3. pH 414
 - 2.1.4. Chemical Quenching 414
 - 2.1.5. Temperature and Viscosity 414
 - 2.1.6. Oxygen 415
 - 2.1.7. Inter Filter Effect 415
3. Concentration and Fluorescence Relationship 415
4. Fluorescence *vis-a-vis* Characteristics of Molecular Structure(s) 416
5. Instrumentation 417
6. Applications of Fluorescence Spectrophotometry in Pharmaceutical Analysis 418
 - 6.1. Assay of Ethinyl Estradiol Tablets 418

PART-F Spectroscopic Methods of Analyses

23. ULTRAVIOLET AND VISIBLE SPECTROSCOPY

423-439

1. Introduction 423
2. Principle 424
3. Molar Absorptivity Factor *vis-a-vis* Radiation Absorption Profile in UV/Visible Region 425
4. Instrumentation 426
 - 4.1. Single-Beam Spectrophotometers 432
 - 4.2. Double-Beam Spectrophotometers 434
5. Application of UV-Spectrophotometry in Pharmaceutical Analyses 436

- 5.1. Assay of Glyceryl Trinitrate Tablets 436
- 5.2. Assay of Furosemide (or Frusemide) Tablets 437
- 5.3. Assay of Penicillins by Derivatisation 437

24. INFRARED SPECTROPHOTOMETRY

441-455

- 1. Introduction 441
 - 1.1. Salient Features 442
 - 1.2. IR-Region(s) in a IR-Absorption Spectrum 443
- 2. Principle 443
 - 2.1. Molecular Vibrations 443
 - 2.1.1. Stretching 443
 - 2.1.2. Bending (or Deformation) 443
 - 2.2. Vibrational Frequency 444
 - 2.2.1. Calculation of Vibrational Frequencies 446
 - 2.2.2. Factors Affecting Vibrational Frequencies 447
 - 2.2.2.1. Vibration Coupling 447
 - 2.2.2.2. Hydrogen Bonding 448
 - 2.2.2.3. Electronic Effects 448
 - 2.2.2.4. Field Effects 449
- 3. Certain Characteristic IR Absorption Peaks 449
- 4. Instrumentation 450
 - 4.1. Source of IR-Radiation 451
 - 4.2. Monochromators 451
 - 4.3. Detectors 452
 - 4.4. Recorder (or Readout Device) 452
 - 4.5. Position of 'Analyte Sample' 452
- 5. Fourier Transform Infrared (FIIR) Spectrophotometer 452
- 6. Applications of IR-Spectrophotometry in Pharmaceutical Analysis 453
 - 6.1. Identification of Pure Single Pharmaceutical Substances (or Drugs) 453
 - 6.2. Assay of Pharmaceutical Dosage Forms (or Secondary Pharmaceutical Products) 453
 - 6.2.1. Aspirin-Phenacetin-Caffeine (APC) Tablets 454
 - 6.2.2. Codeine Phosphate in Tablets 454
 - 6.2.3. Meprobamate in Tablets 454

25. ATOMIC ABSORPTIN SPECTROPHOTOMETRY (AAS)

457-463

- 1. Introduction 457
- 2. Principle 458
- 3. Instrumentation 458
 - 3.1. Light Source 459
 - 3.2. Flame 459
 - 3.3. Burner 459

- 3.4. Monochromator 460
- 3.5. Detector Device 460
- 4. Applications of AAS in Pharmaceutical Analysis 461
 - 4.1. Assay of Total Zn in Insulin-Zn Suspension 461
 - 4.2. Assay of Mg and Ca in Haemodialysis Fluid 462
 - 4.3. Cognate Assays 462

26. ATOMIC EMISSION SPECTROPHOTOMETRY [AES]**465-469**

- 1. Introduction 465
- 2. Principle 466
- 3. Instrumentation 466
 - 3.1. Flame 467
 - 3.2. Monochromator/Filter 467
 - 3.3. Detectors 467
 - 3.3.1. Photographic detector 467
 - 3.3.2. Photomultiplier detector 467
 - 3.3.3. Advantages and Disadvantages of Photographic Vs Photomultiplier Detectors 468
- 4. Applications of Absorption Emission Spectroscopy [AES] 469
 - 4.1. Assay of Na and K in IV-Infusion 469
 - 4.2. Miscellaneous Applications of AES 469

27. FLAME EMISSION SPECTROSCOPY [FES]**471-477**

- 1. Introduction 471
- 2. Principles 471
 - 2.1. Mechanism of Obtaining Atomic Vapour 472
- 3. Instrumentation 473
 - 3.1. Accessories 473
 - 3.2. Atomizers 473
 - 3.3. Flame 474
 - 3.4. Monochromator 474
 - 3.5. Detector 474
- 4. Evaluation Techniques in Flame Emission Spectroscopy [FES] 475
- 5. Applications of FES in Pharmaceutical Analysis 476
 - 5.1. Assay of Ba, K, and Na in Calcium Acetate 476
 - 5.2. FES 476

**28. NUCLEAR MAGNETIC RESONANCE [NMR] AND
ELECTRON SPIN RESONANCE [ESR] SPECTROSCOPY****479-487**

- 1. Introduction 479
- 2. Principles of NMR Spectroscopy 482
- 3. Instrumentation 483

- 3.1. Magnet 483
- 3.2. Field Sweep Generator 484
- 3.3. Radio Frequency Source 484
- 3.4. Signal Detector 484
- 3.5. Recorder Output 485
- 3.6. Sample Holder and Probe 485
- 4. Cardinal Features of NMR-Spectroscopy 485
 - 4.1. Saturation of the Signal 485
 - 4.2. Absorption Positions in NMR-Spectrum 485
 - 4.3. Chemical Shift 485
- 5. Application of NMR-Spectroscopy in Pharmaceutical Analysis 486
 - 5.1. Determination of Structural Isomers 486
 - 5.2. Distinguishing *cis*- and *trans*-Isomers 486
 - 5.3. Determination of Iodine Values of Naturally Occurring Oils 486

29. MASS SPECTROMETRY [MS]

489-507

- 1. Introduction 489
- 2. Principle 490
- 3. Instrumentation 491
 - 3.1. Inlet System 491
 - 3.1.1. Molecular Leak Method 491
 - 3.1.2. Direct Insertion 492
 - 3.1.3. Chromatographic Eluent Insertion 492
 - 3.2. Ion-Source 492
 - 3.2.1. Single Focusing Type Instrument 493
 - 3.2.2. Double Focusing System Instrument 494
 - 3.2.2.1. Neir-Johnson Double Focusing System 494
 - 3.2.2.2. Mattach Herzog Double Focusing System 495
 - 3.2.3. Equations Involved in Dispersion of Ionic Beam into a Spectrum 495
 - 3.3. Detection and Recording 497
 - 3.3.1. Mass Detector Variants 497
 - 3.3.1.1. Faraday Cup Collector 498
 - 3.3.1.2. Electron Multiplier 498
 - 3.3.1.3. Photographic Detection 498
 - 3.4. Instrument Variants 498
 - 3.4.1. Quadrupole Instruments 499
 - 3.4.2. Magnetic Sector Instruments [MSIs] 500
- 4. Mass spectrum presentation 501
- 5. Fragmentation profiles in organic compound variants 502
 - 5.1. Mass Spectrum of Bupivacaine 504
 - 5.2. Mass Spectrum of Chloroquine Isotope Peaks 505

PART-G
Miscellaneous Method**30. RADIOIMMUNOASSAY****511-523**

1. Introduction 511
2. Principle 513
 - 2.1. Antigenic Determinants 513
 - 2.2. Analyses by Competitive Antibody Binding *vis-a-vis* Isotopically Labelled Antigens 514
 - 2.2.1. Aims and Objectives of RIA 515
3. Instrumentation 516
 - 3.1. Centrifuge 517
 - 3.2. Radioactive Counters 517
 - 3.2.1. Gamma Counters 517
 - 3.2.2. Scintillation Counters 518
4. Technique of RIA 518
5. Radioimmunoassay (RIA) pharmaceutical analyses 518
 - 5.1. RIA of Flurazepam in Human Plasma 519
 - 5.1.1. Synthesis of Immunogen (Hapten) 519
 - 5.1.2. Immunisation and Antibody Production 519
 - 5.1.3. Methodology 520
 - 5.1.4. RIA Specificity 520
 - 5.2. RIA of Barbiturates 521
 - 5.2.1. Immunogen Preparation 521
 - 5.2.2. Antiserum Preparation 521
 - 5.2.3. Critical Observations 521

PART-H
Quality Assurance**31. GOOD LABORATORY PRACTICES [GLPs] AND QUALITY ASSURANCE****527-550**

- Preamble 527
1. Introduction 528
 - 1.1. GLP Assures Correct Reporting of Results 528
 - 1.2. Standard Operating Procedures [SOPs] 528
 - 1.3. Quality Assurance Unit (QAU) 529
 2. Importance of Good Laboratory practice [GLPs] 529
 3. Validation of analytical methods 530
 - 3.1. Hierarchy of Analytical Methodology 531
 - 3.2. Generalized Validation Flowchart 532
 - 3.3. The Validation Phenomenon 533

- 3.3.1. Selectivity 533
- 3.3.2. Linearity 534
- 3.3.3. Accuracy 535
 - 3.3.3.1. Recovery Studies 535
 - 3.3.3.2. Improved Validation Method 535
 - 3.3.3.3. Ideal Manner In Validating a Method 536
- 3.3.4. Precision 536
- 3.3.5. Sensitivity 537
- 3.3.6. Range 537
- 3.3.7. Limit of Detection [LOD] 538
- 3.3.8. Limit of Quantitation [LOQ] 538
- 3.3.9. Ruggedness/Robustness 538

[B] QUALITY ASSURANCE OF ANALYTICAL MEASUREMENTS**439-550**

- 1. Introduction 539
- 2. Quality assurance modalities 539
 - 2.1. Control Charts 540
 - 2.2. Proficiency Testing 540
 - 2.3. Documentation and Collection of Data 541
- 3. Accreditation of a quality assurance laboratory 541
- 4. Electron records and electronic signatures 542
 - 4.1. Electronic Records 543
 - 4.1.1. Precautionary Measures 543
 - 4.2. Electronic Signatures 543
 - 4.3. Environmental Protection Agency (EPA): CROMERRR 544
- 5. Analytical documentation 544
- 6. Compliance documents 544
 - 6.1. General Quality System Documents 546
 - 6.2. Preapproval Inspection (PAI): Product-Specific Documents 546
 - 6.3. Technology Transfer Document 547
 - 6.4. Analytical Development Report 547
 - 6.5. Quality Assurance (QA) Review of Analytical Documents 548
 - 6.5.1. Key Documents 548
 - 6.5.2. Miscellaneous Documents 549
