CONTENTS

I. INTRODUCTION

A. History of Microbiology; B. Concepts of Microbiology; C. Major contributions of scientists in the field of microbiology - Antony Van Leeuwen Hoek, Robert Koch, Joseph Lister, Martinus W. Beijerinck, Elie Metchnikoff, Fannie Eilshemius and Waltxher Hesse, Sergei. N. Winogradsky, Paul Ehrlich, Karl Landsteiner, James Watson and Francis Crick, Sir Alexander Fleming, Louis Pasteur, Edward Jenner, Dmitri Iwanowski; D. The Scope of Microbiology; E. The Future of Microbiology; F. Prokaryotes and Eukaryotes - Differential Properties of Procaryotes and Eucaryotes.

II. CLASSIFICATIONS OF MICROORGANISMS

A. Taxonomy - Taxonomic Ranks, Taxonomic Hierarchy, Major characteristics used in taxonomy; B. Classification - Classification based of Major kingdom, Classification based on the nature of nucleic acid, Classification based on type of cell, Three domain concept, Three Kingdom Systems, Five Kingdom concepts, Six kingdom concept, Eight Kindom concepts; C. Classification of Bacteria - The first edition of bergey's manual of systematic bacteriology, The second edition of bergey's manual of systematic bacteriology, Summary of Bergey's Manual of Systematic Bacteriology 2nd edition, Bergey's Manual of Determinative Bacteriology; D. Classification of Algae - Chlorophyta, Euglenophyta, Chrysophyta, Phaeophyta, Rhodophyta, Pyrrhophyta, Charophyta; E. Classification of Protozoa - Phylum Sarcomastigophora, Phylum: Labyrinthomorpha, Phylum: apicomplexa, Phylum: Microspora, Phylum : Acestospora, Phylum: Myxozoa, Phylum: Ciliophora; F. Classification of Fungi; G. Classification of Viruses - Viral properties used in taxonomy, Holmes system of classification, LHT system of Classification of viruses, Classification of Virus by Casjens and King (1975), ICTV system of classification, Baltimore Classification.

III. GENERAL CHARACTERS AND

ULTRA STRUCTURE OF MICROORGANISMS

A. General characters of bacteria; B. Beneficial aspects of bacteria; C.Ultra structure of bacteria – Size, Shape, Arrangements of cell, Plasma membrane, Cytoplasmic matricx, Inclusion bodies-Glycogen, PHB, Cyanophycin, Carboxysomes, Polyphosphate/volutin granules, Nucleoid, Plasmid, Cell wall – Gram positive and Gram negative, Capsule, Slime, Slayer, Pili, Fimbriae, Flagella, Endospore – Sporogenesis; D. Cell wall less forms; E. General characters of Algae; F. Ultrastructure of Algae; G. Economic importance of algae; H. General Characters of Protozoa; I. Ultrastructure of protozoa –

1-14

Entamoeba, Giardia; J. Economic importance of protozoa; K. General Characters of Fungi; L. Ultra structure of fungi – Aspergillus, Candida, Penicilium, Rhizopus, Mucor, Saccharomyces; M. Economic importance of fungi; N. General characters of Viruses; O. Ultra Structure of Viruses; General characters of P. Rickettsia, Q. Chlamydiae, R. Spirochaetes, S. Actinomycetes, T. Archaebacteria, U. Cyanobacteria – Anabaena, Nostoc, Oscillatoria; V. L-Form bacteria; W. Mycoplasma; X. General characters of lichens; Ultra structure of lichens; Economic importance of lichens;

IV. MICROSCOPY AND STAINING

A. Microscopy - Bright field Microscope, Dark field Microscope, Fluorescent Microscope and Phase contrast Microscope, Electron microscopes, Confocal Microscope; B. Staining – Dye, Stain, Categories of staining, Staining procedure, Simple staining, Negative staining, Gram staining, Capsule staining, Spore staining, Acid fast staining, Alberts staining

V. MICROBIAL GROWTH

A. Nutrient and nutrition - Requirements for Carbon, Hydrogen, and Oxygen, Requirements for Nitrogen, Phosphorus and Sulfur, Requirements of Growth Factors, Uses of inorganic ions; B. Nutritional Types of Microorganisms -Major nutritional types of prokaryotes; C.Culture Media- Types of media-Simple medium, Enriched and enrichment medium, Selective medium, Differential medium, Transport medium - Classification of media based on solidification -Solid, Semisolid and Fluid medium; Microbial growth requirements - D. Common ingredients of culture media - Peptone, Meat extracts, Mineral salts, Agar agar, Water; E. Sterilization of media; F. Cultural Variations of Bacteria - Growth on nutrient agar slants, Growth on nutrient agar plates, Growth on nutrient broth, Growth on nutrient gelatin; G. Isolation of Pure Cultures - Serial dilution, Spread Plate, The Streak Plate, The Pour Plate; H. Mechanisms of bacterial multiplication- Binary fission, multiple fissison, budding, fragmentation; I. Culture of Microorganisms - Batch culture- Growth phases - Lag phase, Log phase, Stationary phase, Decline phase, Continuous Culture of Bacteria - Turbidostat, , Synchronous Growth of Bacteria, Diauxic growth, fedbatch culture; J. Measurement of Growth -Measurement of Cell Numbers-Direct microscopic count/ Breed Method, Counting Chamber Technique, Viable Count, electronic coulter counter, Membrane-Filter Technique; Measurement of Cell Mass - Dry Weight Technique, Measurement of nitrogen content, Measurement of Turbidity (Turbidometry); K. Calculation of Generation Time; L. Preservation of Micro organisms - Maintanence in Fresh Media, Storage in Sterile Soil, Storage in Mineral Oil, Storage at Low Temperature / liquid nitrogen, Lyophilization, Storage in Silica Gel.

79-92

VI. IDENTIFICATION OF MICROORGANISMS

A. Identification of Bacteria – Definitions, Phenotypic Methods-specimen collection, processing of specimen, media inoculation, incubation, inspection, identification by biochemical Tests; Rapid Tests, Bacteriophage Typing, identification of uncultured organisms-Flow cytometry, Immunological methods-Precipitation Reactions, Agglutination Reactions, Fluorescent Antibodies, ELISA, Immunoblot/Western Blot. Genotypic methods - Nucleic acid probes, Polymerase Chain Reaction (PCR), Real Time PCR and RT-PCR, RAPD-PCR, DNA sequencing, Restriction Fragment Length Polymorphism, Plasmid fingerprinting; B. Identification of fungus - samples, sample processing, concentration, mincing, media selctection, inoculation, incubation, examination of fungal growth, KOH mount, KOH-DMSO-Ink mount, KOH-Calcoflour fluorescent stain, India ink, giemsa stain; C. Identification yeast – Principal criteria, cultural characters, chrom agar test, germ tube test, india ink, giemsa stain, urease test, nitrate test, ascospore test, modified kinyons test, carbohydrate fermentation, carbohydrate assimilation. D. Identification of intestinal parasites-Introduction-Microscopic methods-Saline Wet Mount of Stool-Iodine Wet Mount; E. Identification of blood and tissue parasite-Thin blood film preparation, Thick blood film preparation-Giemsa stain-Wrights stain-Leishman's Stain; F.Identification of viruses-introduction, direct examination - Antigen detection by ImmunoFluorescence, Electron Microscopy, Light Microscopy for inclusion bodies. Indirect Examination - Cultivation of Animal Viruses -Laboratory Animals, Embryonated Egg, Cell Culture / Tissue Culture; Media Used For Mammalian Cell Culture-Types of Cell Cultures. Serology -Complement fixation test, Hemagglutination inhibition test, Immunofluorescence technique, Neutralization technique, Single radial hemolysis, Radioimmunoassay, ELISA, Particle hemagglutination, Western blot.

VII. CONTROL OF MICROORGANISMS

A. Definitions and terms related to the control of microorganisms; B. Factors affecting Microbial Growth-The Use of Physical Methods in Control - Moist Heat sterilization (autoclaving, pressure cooker, Tyndalization, Pasteurization, Boiling), Dry Heat Sterilization (Flaming, Incineration, Hot air oven), Filtration (Depth filters, Seitz filters, Sintered glass filters, Barkefeld filters or earthenware filters, Chamberland filters, Membrane filters, Syringe filters, Air filters), Radiation, Gaseous Chemicals; The Use of Chemical Agents in Control – Phenolics, Alcohols, Halogens, Heavy Metals, Quaternary Ammonium Compounds, Aldehydes, Sterilizing Gases; C. Antimicrobial Chemotherapy - Biochemical action of Antimicrobial Action, Inhibitors of bacterial and fungal cell walls, Inhibitors of cytoplasmic membranes, Inhibitors of nucleic acid synthesis, and Inhibitors of ribosome function; D. Bacterial resistance-Mechanisms of Resistance, Mechanism to Reduce 159-172

x Contents

Bacterial Resistance; E. Determination of the level of antimicrobial activity -Dilution susceptibility test, Disc diffusion test; E test

VIII. MICROBIAL METABOLISM

A. Metabolism; B. Carbohydrate Metabolism – Glycolysis, Krebs cycle, HMP path way, ED pathway, gluconeogenesis, Generation of ATP- substratelevel phosphorylation, oxidative phosphorylation, Photophosphorylation, Elect ron Transport Chain, The Chemiosmot ic Mechanism of ATP Generation; C. Metabolism of protein – Protein synthesis, catabolism of aminoacid, Biosynthesis of aminoacid, urea cycle; D. Metabolism of Lipid – Oxidation of Triglycerides, oxidation of glycerol, oxidation of Fatty acid (α , β and γ), synthesis of fatty acids, biosynthesis of triglycerides, biosynthesis of cholesterol, Biosynthesis of phospholipid; E. Anaerobic Respiration; F. Fermentations; G. Membrane Transport; H. Liposome; I. Bioluminescence; J. Biosynthesis of bacterial cell wall; K. Photosynthesis. L. Enzymes.

IX. FOOD MICROBIOLOGY

A. Sources of Food; B. Classification of food; C. Microorganisms important in food; Sources of microbial contamination in food; D. Factors affecting kinds and number of microbes in food; E. Spoilage of different food items - Causes of the spoilage of food, Types of food decay, Microbial Spoilage of Foods (Spoilage of bread, Spoilage of fish, Spoilage of egg, Spoilage of Meat, Spoilage of canned food, Spoilage of milk and milk products, Spoilage of fruits and vegetables); F. Food Preservation - Principles of preservations, Conditions for the growth of micro-organisms, Methods of Food preservation- Heat treatment, Irradiation, Smoking, Drying and dehydration, Refrigeration, Freezing, Canning , Sugaring and Salting, Meat curing , Pickling in vinegar , Use of food additives, Filtration. G. Food Poisoning - Staphylococcal Intoxication, Botulism. H. Food borne infections – Listeriosis, Campylobacteriosis, E. coli Infection, Salmonellosis, Shigellosis, Bacillus cereus, Yersinia enterocolitica Gastroenteritis; I. Prevention of Foodborne Diseases; J. Microbial Testing of Foods.

X. SOIL MICROBIOLOGY

A. Soil; B. Soil formation; C. Soil profile; D. Soil types; E. Soil structure; F. Components of soil; G. Soil humus; H. Soil microorganisms – Bacteria, Fungus, Actionomycetes, Protozoans, Algae; I. Root exudates; J. Biogeochemical cycling (Carbon cycle, Nitrogen cycle, Sulphur cycle, Phosphorus cycle, Iron cycle); K. Interactions among Soil Microorganisms (a) beneficial, i) mutualism. ii) commensalisms and iii) proto-cooperation or b) harmful i) amensalism, ii) antagonism, iii) competition iv) Parasitism and v) predation); L. Biofertilizers (Diazotrophs, Rhizobium, Azotobactr,

Contents

Azospirillum, Cyanobacteria, Azolla, Phosphate Solubilizing Microorganisms (PSM), Mycorrhizae, Silicate solubilizing bacteria (SSB); M. Mass production of Bacterial Biofertilizer; N. Mass cultivation of cyanobacterial biofertilizer; O. Role of Biofertilizers in soil fertility and Agriculture; P. Symbiotic nitrogen fixation; Q. Biological Control (Microbial Biocontrol, Bacterial Pathogens in Bio-controls of Crop Pest, Fungi in Biocontrols of Crop Pest, Protozoa in Bio-controls of Crop Pest, Rickettsiae in Bio-controls of Crop Pest, Nematodes in Bio-controls of Crop Pest).

XI. ENVIRONMENTAL MICROBIOLOGY

A. Introduction; B. Scope of ecology; C. Relationship between microbes in different environment; D. Atmosphere-structure, microbes in air, source of contamination, airborne diseases, aerosols, droplet, droplet nuclei, indoor microflora, outdoor microflora, enumeration and assessment of microbes in air; E. Hydrosphere-fresh water, lakes, river, Marine, Estuary ecosystem, zonation, Coral, Microorganism movement between ecosystem; F. Microbial Adaptations of microbes in extreme environment; G. Lithosphere - Forest Ecosystem, desert ecosystem; H. Mangrove; I. Upwelling; J. Eutrophication; K. food chain; L. Waste-Sources of waste-Types of waste; M. Sewage and Wastewater / liquid waste Treatment - Primary treatment-Secondary treatment-Activated Sludge-Anaerobic Digestors-Septic tank -Tertiary Treatment-Disinfection-Oxidation Ponds; N. Semisolid waste treatment-Preliminary operations (Sludge grinding, Sludge degriting, Sludge blending)-Sludge thickening-Sludge stabilization-Conditioning of sludge-Disinfection-Dewatering-Heat drying-Thermal reduction of sludge-Disposal of sludge (Land filling, Lagooning); O. Solid waste treatment-Incineration, Composting, Vermicompost, Silage, Pyrolysis, Gasification, Saccharification, Biogas, Anaerobic digestion; P. Biofuel;-Hydrogen; Biogas; Pyrolysis; Gassification; Saccharification; Q. Drinking water treatment-Types of natural water, Water pollution, Waterborne Pathogens, Measuring Water Quality/ water pollution, Detection of pathogenic microorganisms; R. Biomining and Bioleaching (Microorganisms in biomining, Bacteria Useful for Biomining Operations, Biomining Recovery, Types of biomining, Stirred Tank Biomining, Heap bioleaching, In-situ Bioleaching), Biomining of Copper, Biomining of gold, Microbially Enhanced Oil Recovery (MEOR); S. Bioremediation-Types of bioremediation-In situ Bioremediation-Ex situ Bioremediation-Types of reactions in bioremediation-Phytoremediation-Bioremediation mechanisms-Criteria for Bioremediation / Biodegradation-Strategies for Bioremediation, Bioremediation of Dyes, Bioremediation of Heavy Metals, Bioremediation of Coal Wastes through VAM Fungi, Bioremediation of Xenobiotics; T. Biodegradation- Decomposition of Cellulose, Decomposition of Hemicelluloses-Lignin Decomposition-Protein Decomposition-Microbial Degradation of Xenobiotics-Biodegradation of pesticides-Biodegradation of hydrocarbon-Polychlorinated biphenyls (PCB) biodegradation; U. Biodeterioration- Paper, Textile, Metal, Leather and wood

XII. VIROLOGY

A. General characters; B. History; C. Classification; D. Ultrastructure of viruses; E. Replication of viruses; F. Prions; G. Viroids; Bacteriophages H. T4 Phage, structure, Life cycle; I. Lambda phage- Structure, Lytic and lysoge nic Life cycle; J. M13 phage - Structure and Life cycle; Plant Viruses K. Viral infections of Rice-Tungro disease; L. Sugar cane Mosaic disease; M. Viral infections of Tomato-Tomato Mosaic disease, Tomato leaf curl disease, Tomato spotted wilt; N. Bunchy top of Banana; O. Cotton curl disease; P. Tobacco Mosaic Virus; Q. Cauliflower Mosaic Virus; R. Virusoids and Satellite Virus; Animal Viruses S. Picorna Viruses- Polio virus, Rhino virus; T. Orthomyxo virus -Influenza virus; U. Paramyxo virus-mumps, Measles; V. Arbo virus -Encephalitis, Dengue, Rubella; W. Rabies Virus; X. Herpes Virus- Herpes Simplex Virus, Varicella Zooster Virus, Cytomegalo Virus, Epstein Barr Virus; Y. Adeno Virus; Z. HIV; AA. Blue tongue Virus; AB. Ranikhet disease, AC. FMD; AD. Rinderpest; AE. SV 40; AF- Pox viruses-Small pox; AG-Cancer and Carcinogenic Viruses; AH. Hepatitis; AI. Viral vaccines; AJ. Antiviral agents; AK. Interferons.

XIII. IMMUNOLOGY

A. Introduction; B. Immunohematology- Blood groups, Blood transfusion, Applications; C. Immunity – Innate & acquired; D. Lymphoid organ; E. Cells of immune system; F. Humoral and Cell Mediated Immunity; G. T Cell maturation, activation and differentiation; H. B. Cell Generation, activation and maturation; I. Theories of antibody production; J. Antigens; K. Immunoglobulins; L. Antigen – antibody reactions; M. Transplantation; N. Hypersensitivity reactions; O. MHC; P. Cytokines; Q. Complement; R. Immunity to viral infections; S. Immunity to bacterial infections; T. Immunization.

XIV. MEDICAL MICROBIOLOGY

A. Normal Flora of the Healthy Human Host; B. Host Microbe Interactions; C.
Staphylococcus Infections, D. Streptococcus Infection, E. Pneumonia,
F. Diphtheria, G. Meningitis, H. Whooping Cough, I. Tuberculosis, J. Leprosy,
K. Bacillary Dysentery, L. Cholera, M. Typhoid Fever, N. Gonorrhea,
O. Syphilis, P. Tetanus, Q. Chanchroid; R. Vaginitis; S. Anthrax; T. Small Pox,
U. Common Cold, V. Influenza, W. Measles, X. Mumps, Y. Polio, Z. Rabies

AA. Hepatitis, AB. AIDS, AC. Chicken Pox; , AD. Dengue, AE. Yellow fever; AF. Cold Sore; AG. Superficial Mycosis (Pityriasis versicolor, Tinea Nigra, Piedra, Dermatophytosis), AH. Subcutaneous Mycoses (Sporotrichosis, Chromoblastomycoses, Mycetoma); AI. Systemic Mycosis (Coccidioidomycosis, Histoplasmosis, Blastomycosis, Candidiasis, Cryptococcosis); AJ. Amoebiosis, AK. Giardiasis, AL. Malaria, AM. Ascariasis, AN. Filariosis; AO. Zoonotic infections; AP. Hospital Borne Infection.

XV. INDUSTRIAL MICROBIOLOGY

A. Stages of Fermentation, B. Major characters of suitable industrial microorganisms, C. Screening of industrially important microorganisms, D. Fermentation Media-Media Requirements and Media formulations, Sterilization of media, E. Fermentor-Design and role of different parts of fermentor-Characteristics of an Ideal Fermentor or bioreactor, F. Types of Fermentor-Batch fermenter-Components of batch fermenter, G. The major types of bioreactors used in submerged process, H. Bioreactors Used for Solid-substrate Fermentations, I. Downstream processing, J. Ethanol production, K. Penicillin production, L. Citric acid, M. Lactic acid, N. Acetic acid, O. Amylase, P. Glutamic acid, Q. Vitamin B12.

XVI. MICROBIAL GENETICS AND MOLECULAR BIOLOGY

A. DNA as Genetic Material - Griffith's Transformation Experiment-Identification of the Transforming Principle-Blender experiment-Bacterial Conjugation; B. RNA as a genetic material; C. Nucleic acids, D. DNA-salient features, types of DNA-Function of DNA; E. RNA-Structure -types-mRNAtRNA-rRNA-difference between DNA and RNA; F. Replication of DNA-Semiconservative-thetamodel-rolling circle, G. Gene, H. Genetic code -Whooble hypothesis; I. Deciphering the Code, J. Gene Transfer Methods -Bacterial Conjugation-F+ and F- Mating-Hfr Conjugation-F2 Conjugation-DNA Transformation-Transformation in Streptococcus pneumonia-Bacillus subtilis- Haemophillus influenza-artificaial transformation- Transduction, K. Transposable elements, L. Regulation of Gene Action In Prokaryotes -Transcriptional Control Mechanisms - Mechanism of lac operon-Translational Control; M. Biosynthesis of RNA (Transcription), N. Post Transcriptional Modification, O. Mutation-Types- Mutagen-Molecular basis of Mutations- P. Detection and isolation of mutants-replica platingcarcinogenicity testing, Q. DNA repair, R. Sequencing of Gene-Maxam and Gilbert's Chemical Degradation Method- Sanger's Dideoxynucleotide Synthetic Method-Automated DNA Sequencing; S. PCR; T. DNA finger Printing.

XVII. MICROBIAL BIOTECHNOLOGY

A. Defnitions; B. Basic principles of Biotechnology; C. Concepts of biotechnology; D. Products of Biotechnology; E. History of Biotechnology; F. Enzyme Technology - Definition, characteristics of enzymes, classification of enzymes, chemical nature of enzymes, factors influencing enzyme action, mechanism of enzyme action, Coenzyme, Cofactor, Microorganisms in enzyme technology, the technology of enzyme production, selection of organism, formulation of medium, production process, recovery and purification of enzymes, regulation of microbial enzyme production, genetic engineering in enzyme production, G. Application of microbial enzymes, H. Immobilization of Enzyme -advantages, disadvantages, methods-adsorption, entrapment, micro encapsulation, covalent binding, cross linking, applications, immobilization of cell; I. rDNA technology-basic steps-isolation of DNA, purification of DNA, concentration of DNA, preparation of desired DNA preparation of plasmid DNA, Manipulation of plasmid DNA, Manipulative enzymes, - RE, ligation, introduction of DNA into the cell, identification of recombinants; J. Cloning Vectors; K. Basic techniques in genetic engineering-agarose gel electrophoresis, purification methods of plasmid-Birnbiom and doly method, isopycnic method, purification of mRNA, isolation of chromosomes, nucleic acid blotting techniques-southern, , northern, dot bloting, autoradiography, colony and plaque blotting; L. Strain improvement; M. Microalgal technology-application, N. cultivation of spirulina, O. Application of microalgae-Algae as food, feed, fertilizers, fuel, pharma compounds, SCP, pigment, hydrocarbon, steroid, polysaccharide, enzymes; P. SCP-Defnition, history, advantages, microbes used, Algal SCP, Yeast SCP, fungal SCP, Mushroom; Q. Bioinsecticide-BT; R. Hormone; S. Insulin, T. Somatotropin, U. Somatostatin; V. Gene therapy; W. Hybridoma Technology; X. Fermented Milk – kefir, viili, cheese, Yoghurt, Y. Wine, Z. Beer, AA. bread, AB. Sauerkraut, AC. Recombinant Vaccines.
