

# Contents

Preface

vii

## Part A: Theory

### Unit I

1. Solubility and Related Phenomenon 3

### Unit II

2. States and Properties of Matter 32  
3. Physicochemical Properties of Drug Molecules 46

### Unit III

4. Surface and Interfacial Phenomenon 62

### Unit IV

5. Complexation and Protein Binding 106

### Unit V

6. pH, Buffers and Isotonic Solutions 133

## Part B: Practicals

1. Determination of Solubility of Drugs 155  
2. Determination of  $pK_a$  by Half Neutralization 158  
3. Determination of Partition Coefficient of Benzoic Acid 162  
4. Determination of Partition Coefficient of Iodine 166  
5. Determination of Percentage Composition Using Phenol–Water System 170  
6. Determination of Surface Tension by Drop Count and Drop Weight Method 173  
7. Determination of a Surfactant's Hydrophilic–Lipophilic Balance 177  
8. Determination of Freundlich and Langmuir Constants 181  
9. Determination of Surfactants' Critical Micellar Concentration 185  
10. Determination of Stability Constant by Solubility Method 188  
11. Determination of Stability Constant by pH Titration Method 192  
Bibliography 196  
Index 197
