1. Introduction to Examination of a Surgical Patient 1–17

Introduction 1
Student–patient relationship 1
Patient data 2
Summary 3
Complaints 3
History of present illness 4
General physical examination 7
Local examination (regional examination) 13
Per rectal (PR) and per vaginal (PV) examination 15
Systemic examination 15
Clinical diagnosis/working diagnosis 15

2. Surgical Patient—Symptoms and Signs of Surgical Importance 18–29

Introduction 18
Loss of appetite (anorexia) 18
Flushing 18
Hiccup 19
Pain 19
Itching; Pruritus 20
Pedal oedema 20
A few signs of surgical importance 21
Prominent veins 21
Fluctuation 23
Transillumination 24
Mobility 24
Bimanual palpation 25
Ballottement 25
Crepitus 25
Tracheal tug 26
Pigmentation 26
Skin lesions 26
Virchow node 27
Scalene node 27
Tongue 28

3. Examination of an Ulcer 30–46

Definition 30
Introduction 30
History of present illness 31
Past history 31
General physical examination 31
Clinical examination of an ulcer 31
Relevant clinical examination 35
Investigations 37
Treatment 37
Ulcer head and neck including face 42
Ulcer in the back 43
Analysis of a case of ulcer in the back
and clinical discussion 44
Ulcers in the abdominal wall 45
Viva favourite questions and answers 46

4. Examination of Swelling 47–91

Introduction 47
Patient data 47
Local regional examination 52
Contraction of the muscles against resistance 60
Clinical diagnosis 62
Clinical analysis of four common cases 78
Site-specific differential diagnosis 79
Common swellings in the legs/foot 80
Common swellings in the axilla 82
Common swellings in the back 84
Common swellings in the face 85
Common swellings in the chest wall 87
Swellings in the scalp 89

5. Examination of a Sinus and Fistula 92–102

Introduction 92
Sinus 92
Fistula 93
History 94

Past history 94
 Local examination 95
 Relevant clinical examination 98
 Investigations 99
 Clinical analysis of a case of sinus
 in the chest wall 101
 Case of multiple sinuses in the leg 102

6. Examination of Keloid, Hypertrophic Scar and Contractures 103–105

Introduction 103
 History taking 103
 Inspection 103
 Palpation 104
 A case of post-burn contracture 105

7. Examination of Lower Limb Ischaemia, Peripheral Arterial Occlusive Disease and Aneurysm 106–125

Introduction 106
 Patient data 106
 History of present illness 106
 Local/regional examination 110
 Systemic examination 116
 Investigations 120
 Treatment 121
 Aneurysm 122
 Clinical examination 122
 Local examination 122
 Examination of a case of arteriovenous fistula 124
 Local examination 124

8. Examination of Upper Limb Ischaemia 126–135

Introduction 126
 Patient data 126
 History 126
 Clinical examination of a case of
 upper limb ischaemia 128
 Gangrene 133

9. Examination of Varicose Veins 136–146

Introduction 136
 Clinical examination of a case of varicosity of the
 leg 137
 General physical examination and its relevance in
 varicose veins 137
 Local examination/regional examination 138

Tests for short saphenous varicosity 143
 Deep vein thrombosis (DVT) 145

10. Examination of the Lymphatic System 147–163

Introduction 147
 Terminology 147
 Patient data and history of present illness 147
 General physical examination 148
 Local/regional examination 149
 Special lymph nodes 154
 Supraclavicular lymph node—Virchow's node 154
 Epitrochlear node enlargement 155
 Scalene node 155
 Look for evidence of the primary 155
 Examination of abdomen 156
 Lymphadenopathy in the groin 160
 Lymphadenopathy in the axilla 161
 Lymphoedema of leg 161
 Examination of lymphatic vessels 162
 A case of lymphoedema of the leg 163

11. Examination of Peripheral Nerves 164–171

Introduction 164
 History of present illness 164
 Inspection 164
 Palpation 165
 Examination of nerves of upper limb 166
 Sensations of the upper limb 170
 Nerves of the lower limb 170
 Sciatic nerve 170
 Sensations 171

12. Examination of the Hand and Foot 172–184

Introduction 172
 Classification 172
 History of present illness 172
 Clinical examination 173
 Examination of foot 181
 Malignant tumours in the foot 183

13. Examination of Skin and Skin Tumours 185–198

Introduction 185
 History of present illness 185
 Personal history/occupation 188
 General physical examination 188
 Local examination 188
 Benign lesions of the skin 196
 Miscellaneous—few pictures 198

14. Examination of Face, Pinna and Scalp 199–205

Introduction 199
 Differential diagnosis 199
 Some characteristic facies 202
 Cleft lip and palate 203
 Cleft palate 204
 Trigeminal nerve and surgeon 205

15. Examination of the Salivary Glands 206–221

Introduction 206
 Patient data 206
 History of present illness 206
 Clinical checklist in salivary gland swellings 212
 Tests for facial nerve paralysis 213
 Parotid swelling 213
 Submandibular swelling 218

16. Examination of the Oral Cavity 222–235

Introduction 222
 Patient data 222
 History of presenting illness 224
 Clinical checklist 231
 Diagnosis 231
 Carcinoma maxillary antrum 234
 Benign swellings in the tongue—macroglossia 234
 Miscellaneous 235

17. Examination of Jaw Swelling 236–241

Introduction 236
 History and physical examination 236
 Jaw swelling 238
 Sinuses of the jaw 240
 Miscellaneous 241

18. Examination of the Neck Swelling 242–265

Introduction 242
 Triangles of neck 242
 History of present illness 243
 Local/regional examination 245
 Differential diagnosis of midline swellings 250
 Differential diagnosis of lateral swellings 254
 Differential diagnosis of swellings in the anterior triangle 254
 Cysticercosis and the surgeon 262

19. Examination of Thyroid Swelling 266–289

Introduction 266
 Patient data 266

Presenting complaints 267
 Past history/treatment history 269
 General physical examination 270
 Local examination/regional examination 271
 Systemic examination 277
 Diagnosis 281
 Investigations 281

20. Examination of the Breast 290–309

Introduction 290
 Patient data 290
 History of present illness 290
 General physical examination 293

21. Examination of a Case of Dysphagia 310–316

Introduction 310
 History of present illness 310
 General physical examination/
 Regional examination 311
 Causes 312
 Mediastinal masses 315

22. Examination of an Acute Abdomen 317–337

Introduction 317
 Patient's data 317
 Complaints—history of present illness 318
 General physical examination (GPE) 322
 General physical examination and
 acute abdomen 322
 Abdominal examination—per abdomen 323
 Look for hernial sites 325
 An interesting case of acute abdomen 337

23. Examination of Chronic Abdomen 338–359

Introduction 338
 History of present illness 338
 General physical examination 340
 Abdominal examination 340
 Per rectal examination and per vaginal
 examination 348

24. Examination of Abdominal Mass 360–412

Introduction 360
 Clinical examination of abdominal mass 360
 History of present illness 360
 General physical examination 364
 Abdominal examination—regional examination 364
 Mass in the right hypochondrium 377
 Mass in the epigastrium 384

Mass in the left hypochondrium 389
 Mass in the right lumbar region 393
 Mass in the umbilical region 396
 Mass in the left lumbar region 398
 Mass in the right iliac fossa 398
 Intra-abdominal swelling 399
 Specific masses in females 404
 Mass in the hypogastrium 405
 Mass in the left iliac fossa 407
 The cystic mass in the abdomen 409
 Large masses in the abdomen 410
 Three interesting clinical case capsules 411

25. Examination of Anorectal Case 413–425

Introduction 413
 Complaints: History of present illness 413
 Inspection of the anal region 415
 Rectal examination 417

26. Examination of Urinary Tract and Renal Mass 426–439

Introduction 426
 Patient data 426
 History of present illness (complaints) 426
 Regional examination or local examination 429
 Examination of the urinary bladder 430
 Rectal examination 431
 Other diseases of kidney 434
 Diseases of ureter and bladder 436

27. Examination of Hernia 440–458

Introduction 440
 Indirect hernia 440
 Direct hernia 441
 Clinical examination of inguinal hernia 441
 More details about inguinal hernia 448
 Anatomical classification 449
 Clinical classification 449
 Femoral hernia 452
 Differential diagnosis of femoral hernia 453
 Case of umbilical hernia of adults 453
 Incisional hernia 454
 Epigastric hernia 455
 Spigelian hernia 456
 Lumbar hernia 457
 Obturator hernia 458

28. Examination of Scrotum and Testis 459–469

Introduction 459
 History of present illness 459
 Regional examination 460

29. Examination of Penis 470–475

Introduction 470
 Complaints/history of present illness 470
 Phimosis 473
 Paraphimosis 473
 Hypospadias 473
 Condyloma acuminatum 473
 Buschke-Löwenstein tumour 473
 Carcinoma penis 474
 Peyronie's disease (penile fibromatosis) 475
 Fracture of penis 475

30. Viva Voce Examination 476–531

Introduction 476
Instruments 487
 Suture materials 500
 Absorbable 500
 Nonabsorbable 501
Specimens 502
Operative surgery 511
 Introduction 511
 Appendectomy 511
 Modified Bassini's herniorrhaphy 513
 Lichtenstein repair 515
 Surgery for hydrocoele 515
 Incision and drainage (I and D) 517
 Incision and drainage of breast abscess 518
 Circumcision 519
 Venesection or cut down 519
 Vasectomy 520
 Tracheostomy 521
 Suprapubic cystostomy (SPC) 522
 Thyroidectomy 523
 Amputations 525
 Amputations in leg 527
 Upper limb amputations 529
 Excision of swellings 530
