Product Description

Postgraduate students, who have plenty to remember and revise in their final stages of exam preparation and consequently during their crucial practical examinations, are unable to precisely answer what an examiner expects for a particular case scenario. Recreating the examination hall scenario and simulate what transpires during those few hours between the student and the examiners is the main aim of this book. The 80 long and short cases, along with chapters on spotters and goniometry, form the content of this book. Chapters include many relevant photographs and X-rays which help in understanding the difficult concepts. Each chapter is a condensation of cardinal information required to be presented in the examination. The book will serve as a valuable resource for presenting cases during the routine ward rounds or teaching sessions to both the postgraduates and the faculty.

Once mastered, these techniques may form the basis for a variety of modifications suitable for specific conditions. Massage for Therapists is split into three sections: an introduction to massage and preparation for giving a massage; the massage manipulations by area of the body; and some key modifications to the standard manipulations. In order to further enhance the practitioner's skill and to give the reader a grounding in some of the popular specialities, updated chapters on aromatherapy and massage in sport sit alongside new chapters which introduce myofascial release and shiatsu. Massage for Therapists will be of interest to student and qualified physiotherapists and sports therapists, as well as occupational therapists, chiropractors, osteopaths, nurses, complementary therapists and beautytherapists.
